Diffractioned Worlds - Diffractive Readings Birgit M. Kaiser, Kathrin Thiele, 2018-10-18 Diffraction patterns in quantum physics evidence the fact that the behavior of matter is the result of its entanglements with measurement or as Karen Barad suggests the entanglement of matter and meaning In this sense therefore phenomena including texts cultural agents or life forms are the results of their relational onto epistemological entanglements and not individual entities that separately pre exist their joint becoming As such diffraction proposes a new understanding of difference no longer a dualist understanding but one going beyond binaries Diffraction is about patterns constellations relationalities From this angle the book explores diffraction which has begun to impact critical theories and humanities debates especially via new materialist feminisms STS and quantum thought but is often used without further reflection upon its implications or potentials Doing just that the book also pursues new routes for the onto epistemological and ethical challenges that arise from our experience of the world as relational and radically immanent because if we start from the ideas of immanence and entanglement our conceptions of self and other culture and nature cultural and sexual difference our epistemological procedures and disciplinary boundaries have to be rethought and adjusted The book offers an in depth consideration of diffraction as a quantum understanding of difference and as a new critical reading method It reflects on its import in humanities debates and thereby also on some of the most inspiring work recently done at the crossroads of science studies feminist studies and the critical humanities This book was originally published as a special issue of *Parallax*

On the Verge of a Planetary Civilization Sam Mickey, 2014-09-18 *On the Verge of a Planetary Civilization* presents a philosophical contribution to integral ecology an emerging approach to the field that crosses disciplinary boundaries of the humanities and sciences In this original book Sam Mickey argues for the transdisciplinary significance of philosophical concepts that facilitate understandings of and responses to the boundaries involved in ecological issues Mickey demonstrates how much the provocative French philosopher Gilles Deleuze contributes to the development of such concepts situating his work in dialogue with that of his colleagues Felix Guattari and Jacques Derrida and with theorists who are adapting his concepts in contemporary contexts such as Isabelle Stengers Catherine Keller and the speculative realist movement of object oriented ontology The book focuses on the overlapping existential social and environmental aspects of the ecological problems pervading our increasingly interconnected planet It explores the boundaries between self and other humans and nonhumans sciences and humanities monism and pluralism sacred and secular fact and fiction the beginning and end of the world and much more

The Review of Metaphysics, 2010 *Creative Ecologies* Hélène Frichot, 2018-12-13 Architect and philosopher Hélène Frichot examines how the discipline of architecture is theorized and practiced at the periphery Eschewing a conventionally direct approach to architectural objects to iconic buildings and big name architects she instead explores the background of architectural practice to introduce the creative ecologies in which architecture exists only in relation to other objects and ideas Consisting of a series of philosophical encounters with architectural practice that are neither neatly located in one domain nor the other this book is concerned with other ways of doing architecture It examines architecture at the limits where it is muddled by alternative disciplinary influences whether art practice philosophy or literature Frichot meets a range of creative characters who work at the peripheries and who challenge the central assumptions of the discipline showing that there is no core of architecture there is rather architecture as a multiplicity of diverse concerns in engagement with local environments and worlds From an author well known in the disciplines of architecture and philosophy for her scholarship on Deleuze this is a radical accessible and highly original approach to design research deftly engaging with an array of current topics from the Anthropocene to affect theory new materialism to contemporary feminism Proceedings and Addresses of the American Philosophical Association American Philosophical Association, 2011 List of members in v 1 **Current**
