The town mourns, except who really knew, let alone cared about Eden when she was alive. And why was she in the building that night? Five teens each hold a piece of the truth about what happened. But silence is meant to be broken, and this story can't be extinguished. **The Ends of Knowledge** Rachael Scarborough King, Seth Rudy, 2023-06-01. Bringing together an exciting group of knowledge workers, scholars, and activists from across fields, this book revisits a foundational question of the Enlightenment: what is the last or furthest end of knowledge? It is a book about why we do what we do and how we might know when we are done. In the reorganization of knowledge that characterized the Enlightenment, disciplines were conceived as having particular ends, both in terms of purposes and end points. As we experience an ongoing shift to the knowledge economy of the Information Age, this collection asks whether we still conceptualize knowledge in this way. Does an individual discipline have both an inherent purpose and a natural endpoint? What do an experiment on a fruit fly, a reading of a poem, and the writing of a line of code have in common? Focusing on areas as diverse as AI, biology, Black studies, literary studies, physics, political activism, and the concept of disciplinarity itself, contributors uncover a life after disciplinarity for subjects that face immediate threats to the structure, if not the substance, of their contributions. These essays, whether reflective, historical, eulogistic, or polemical, chart a vital and necessary course towards the reorganization of knowledge production as a whole. **This Is Where It Ends** Marieke Nijkamp, 2017-05-01. Genericity Alda Mari, Claire Beyssade, Fabio Del Prete, 2013 This book provides an up to date introduction to the study of generics and pursues the enterprise of the influential Generic Book edited by Gregory Carlson and Jeffry Pelletier which was published in 1995 Genericity is a key notion in the study of human cognition as it reveals our capacity to organize our perceived reality into classes and to describe regularities The generic can be expressed at the level of a word or phrase ie the potato in The Irish economy became dependent upon the potato or an entire sentence eg in John smokes a cigar after dinner the generic aspect is a property of the expression rather than any single word or phrase within it This book gathers new work from senior and young researchers to reconsider the notion of genericity examining the distinct contributions made by the determiner phrase eg the notions of kind individual and the verbal predicate eg the notions of permanency disposition ability habituality and plurality Finally in connection with the whole sentence the analytic synthetic distinction is discussed as well as the notion of normality The book will appeal to both students and scholars in linguistics philosophy and cognitive science

Time and Causality Marc J. Buehner, 2014-08-06 The problem of how humans and other intelligent systems construct causal representations from non causal perceptual evidence has occupied scholars in cognitive science for many decades Most contemporary approaches agree with David Hume that patterns of covariation between two events of interest are the critical input to the causal induction engine irrespective of whether this induction is believed to be grounded in the formation of associations Shanks Dickinson 1987 rule based evaluation White 2004 appraisal of causal powers Cheng 1997 or construction of Bayesian Causal Networks Pearl 2000 Recent research however has repeatedly demonstrated that an exclusive focus on covariation while neglecting contiguity another of Hume s cues results in ecologically invalid models of causal inference Temporal spacing order variability predictability and patterning all have profound influence on the type of causal representation that is constructed The influence of time upon causal representations could be seen as a bottom up constraint though current bottom up models cannot account for the full spectrum of effects However causal representations in turn also constrain the perception of time Put simply two causally related events appear closer in subjective time than two equidistant unrelated events This reversal of Hume s conjecture referred to as Causal Binding Buehner Humphreys 2009 is a top down constraint and suggests that our representations of time and causality are mutually influencing one another At present the theoretical implications of this phenomenon are not yet fully understood Some accounts link it exclusively to human motor planning appealing to mechanisms of cross modal temporal adaptation or forward learning models of motor control However recent demonstrations of causal binding in the absence of human action and analogous binding effects in the visual spatial domain challenge such accounts in favour of Bayesian Evidence Integration This Research Topic reviews and further explores the nature of the mutual influence between time and causality how causal knowledge is constructed in

the context of time and how it in turn shapes and alters our perception of time We draw together literatures from the perception and cognitive science as well as experimental and theoretical papers Contributions investigate the neural bases of binding and causal learning perception methodological advances and functional implications of causal learning and perception in real time *Katzung & Trevor's Pharmacology Examination & Board Review, Fourteenth Edition* Marieke Kruidering-Hall, Rupa Lalchandani Tuan, Todd W.
