The Symmetries Of Things:

The Symmetries of Things John H. Conway, Heidi Burgiel, Chaim Goodman-Strauss, 2016-04-05 Start with a single shape Repeat it in some way translation reflection over a line rotation around a point and you have created symmetry Symmetry is a fundamental phenomenon in art science and nature that has been captured described and analyzed using mathematical concepts for a long time Inspired by the geometric intuition of Bill Thurston and empowered by his own analytical skills John Conway with his coauthors has developed a comprehensive mathematical theory of symmetry that allows the description and classification of symmetries in numerous geometric environments This richly and compellingly illustrated book addresses the phenomenological analytical and mathematical aspects of symmetry on three levels that build on one another and will speak to interested lay people artists working mathematicians and researchers

The Magic Theorem John H. Conway, Heidi Burgiel, Chaim Goodman-Strauss, 2025-07-11 The Magic Theorem a Greatly Expanded Much Abridged Edition of The Symmetries of Things presents a wonder fully unique re imagining of the classic book The Symmetries of Things Begun as a standard second edition by the original author team it changed in scope following the passing of John Conway This version of the book fulfills the original vision for the project an elementary introduction to the orbifold signature notation and the theory behind it The Magic Theorem features all the material contained in Part I of The Symmetries of Things now redesigned and even more lavishly illustrated along with new and engaging material suitable for a novice audience This new book includes hands on symmetry activities for the home or classroom and an online repository of teaching materials

The Epistles of st John: the Gr. text with notes and essays by B.F. Westcott Brooke Foss Westcott, 1902

The Epistles of St. John Brooke Foss Westcott, 1886

The Nature of Order, Book Two: The Process of Creating Life Christopher Alexander, 2020-03-30 Scientifically this is perhaps the most exciting of the four books How do beautiful creations come into being Nature can make an infinite number of human faces each one unique each one beautiful The same is true for daffodils streams and stars But man made creations especially the towns and buildings of the 20th century have only occasionally been really good more often mediocre and in the last 50 years have most often been deadly What is the reason for the difference It hinges on the deep nature of the processes we use Merely understanding the geometry of beautiful and living form the topic of Book 1 is not enough to help us create such a living geometry In the 20th century our society was locked into deadly processes which created our current built environment process that most people were not really aware of and did not question Despite their best efforts and intentions architects and planners working within these processes could not achieve a living built environment Life and beauty in the built world arise only from processes which allow living structure to unfold The secret lies in knowing as nature does what must happen in what order what sequence of events allows a living form to unfold successfully Here in Book 2 Alexander puts forward a fully developed theory of living process He defines conditions for a process to be living that is capable of generating living structure He shows how such processes work and how they may

be created At the core of the new theory is the theory of structure preserving transformations This concept new in scientific thinking is based on the concept of wholeness defined in Book 1 A structure preserving transformation is one which preserves extends and enhances the wholeness of a system Structure preserving transformations provide the means for any step by step process social biological architectural or technical to reach configurations which are most profound most capable of supporting life The process of creation whether in the formation of a single object or in the piece meal aggregation of a town requires this sort of generative process a careful and deliberate sequence of steps in which each step creates the context for the next one and each next wholeness is derived from the previous wholeness Our billions of beautiful and unique human faces come from one class of sequences Driven by these sequences an initial cell differentiates again and again until beautiful and complex human beings emerge infinitely various always harmonious Making changes in society so that streets buildings rooms gardens and towns may be generated by hundreds of such sequences requires massive transformations This book is the first blueprint of those transformations
