THE SYMPTOM AND THE SUBJECT

Brooke Holmes

The Symptom And The Subject The

Robert R. Redfield

The Symptom And The Subject The:

The Symptom and the Subject Brooke Holmes, 2010-04-19 The Symptom and the Subject takes an in depth look at how the physical body first emerged in the West as both an object of knowledge and a mysterious part of the self Beginning with Homer moving through classical era medical treatises and closing with studies of early ethical philosophy and Euripidean tragedy this book rewrites the traditional story of the rise of body soul dualism in ancient Greece Brooke Holmes demonstrates that as the body's *ma* became a subject of physical inquiry it decisively changed ancient Greek ideas about the meaning of suffering the soul and human nature By undertaking a new examination of biological and medical evidence from the sixth through fourth centuries BCE Holmes argues that it was in large part through changing interpretations of symptoms that people began to perceive the physical body with the senses and the mind Once attributed primarily to social agents like gods and daemons symptoms began to be explained by physicians in terms of the physical substances hidden inside the person Imagining a daemonic space inside the person but largely below the threshold of feeling these physicians helped to radically transform what it meant for human beings to be vulnerable and ushered in a new ethics centered on the responsibility of taking care of the self The Symptom and the Subject highlights with fresh importance how classical Greek discoveries made possible new and deeply influential ways of thinking about the human subject *The Psychology of Physical Symptoms* J.W. Pennebaker, 2012-12-06 Physical symptoms are fascinating phenomena to examine We all experience them use them as signals to guide our behavior and usually assume that they accurately represent underlying physiological activity At the same time we implicitly know that bodily sensations are often vague ambiguous and subject to a variety of interpretations It is not surprising then that there is often a disparity between what we think is going on in our bodies and what is objectively occurring In short phenomena such as physical symptoms are the stuff of psychology My own research into physical symptoms started by accident several years ago In a hastily devised experiment dealing with the effects of noise on behavior I had to write a post experimental questionnaire that would be long enough to allow the experimenter time to calibrate some equipment for a later portion of the study I included some physical symptoms on the questionnaire as fillers The experiment was a total failure with the exception of the symptom reports People's perceptions of symptoms were easily influenced by our manipulations even though their actual physiological state had not changed And so began the present inquiry Despite the pervasiveness importance and sheer amount of time and money devoted to discussing and curing common physical symptoms and sensations very little empirical work has been devoted to examining the psychological and perceptual factors related to sensory experience Occasional papers have tested a specific theory such as cognitive dissonance wherein physical symptoms served as an interesting dependent measure **The Unwritten Enlightenment** Nathan Gorelick, 2024-03-15 Unveiling the fantasies that drove the Enlightenment and created modern literature Nathan Gorelick's *The Unwritten Enlightenment* Literature between Ideology and the Unconscious traces the relations between

literary criticism and psychoanalysis to their shared origins in the Enlightenment era's novels and novelistic discourse where the period's efforts to invent new notions of subjectivity and individualism are most apparent Gorelick shows how modern concepts of literature and the unconscious were generated in response to these efforts and by an ethical concern for what the language of the Enlightenment excludes represses or struggles to erase Troubling the idea of the Enlightenment on its own terms subverting its supposed authority from within Gorelick thus reveals the workings of unconscious fantasy at the foundations of our contemporary political realities The Unwritten Enlightenment makes clear that to criticize the Enlightenment's deficiencies ambiguities and legacies of violence without regard for the unconscious fantasies that drive them risks reproducing the very patterns of thought action and imagination that the Enlightenment novel already unsettles

The Psychoanalysis of Symptoms Henry Kellerman, 2008 In this book Dr Henry Kellerman presents a set of principles psychological psychoanalytic axioms which underpin the curing of psychological emotional symptoms through the use of four terms that comprise a psychological equation Each of these terms is spelled out and then throughout the book specific symptoms are identified and in a step by step display the reader can follow the cure of the symptom through the use of this new discovery

Progressive Adaptation to Coriolis Accelerations Associated with 1-rpm Increments in the Velocity of the Slow Rotation Room James T. Reason, Ashton Graybiel, 1969 The purpose of this experiment was to answer specific questions relating to the design of an adaptation schedule effective in protecting against motion sickness in a rotating environment Ten men with normal vestibular function executed controlled head and body movements at each of ten 1 rpm step increase in the velocity of the Pensacola Slow Rotation Room On the completion of every moment subjects were required to indicate whether or not they had detected sensations of vestibular or somatosensory origin At each velocity step the movements were continued until each of 24 consecutive movements had elicited a negative response and the subject was judged to be symptom free When this arbitrary adaptation criterion was reached the angular velocity was increased by 1 rpm and the procedure repeated On attaining the criterion at the terminal velocity 10 rpm the rotation was stopped and the postrotatory phenomena were investigated using the same techniques The principal finding was that the number of movements necessary to achieve the adaptation criterion was systematically related to the absolute level of angular velocity Considerably more head and body movements were required to reach the same level of adaptation at faster speeds than at slower speeds even though the size of the step increment remained constant There was some evidence to indicate that the amount of stimulation to criterion depended upon the initial magnitude of sensation elicited by the increment There were also wide individual differences in both the rate of adaptation and the minimum velocity necessary to evoke sensation Author
