Zeta Eta Functions New Hypothesis:

Zeta and Eta Functions Ashwani Kumar Thukral, 2015-12-17 Euler Riemann's zeta and Dirichlet's eta functions are defined for real negative numbers as analytic continuation. In the present book the author defines new series for zeta and eta functions for real negative and imaginary numbers without analytic continuation. The new zeta and eta functions maintain the character of harmonic series and alternating harmonic series respectively for real negative numbers as for real positive numbers. Zeta and eta functions have also been defined for multiple and fractional harmonic series. [Introduction to Number Theory](#) Anthony Vazzana, Martin Erickson, David Garth, 2007-10-30 One of the oldest branches of mathematics, number theory, is a vast field devoted to studying the properties of whole numbers. Offering a flexible format for a one or two semester course, [Introduction to Number Theory](#) uses worked examples, numerous exercises, and two popular software packages to describe a diverse array of number theory topics. **An analytic survey on number theory using Taylor expansion on analytic functions of the general Dirichlet L series** Sunny Kumar, 2025-08-30 In this article we apply the Taylor expansion to the eta function geometrically and obtain twelve equations inside the critical strip which converge to a dual equation on the critical line for any hypothetical zero. We have reduced to a hidden property P which yields the Riemann Hypothesis and Birch Swinnerton-Dyer Conjecture through analytical geometry and linear algebraic constraints.

[Euclidean Quantum Gravity on Manifolds with Boundary](#) Giampiero Esposito, A.Yu. Kamenshchik, G. Pollifrone, 2012-12-06 This book reflects our own struggle to understand the semiclassical behaviour of quantized fields in the presence of boundaries. Along many years motivated by the problems of quantum cosmology and quantum field theory, we have studied in detail the one-loop properties of massless spin-1/2 fields, Euclidean Maxwell theory, gravitino potentials, and Euclidean quantum gravity. Hence our book begins with a review of the physical and mathematical motivations for studying physical theories in the presence of boundaries, with emphasis on electrostatics, vacuum Maxwell theory, and quantum cosmology. We then study the Feynman propagator in Minkowski space-time and in curved space-time. In the latter case, the corresponding Schwinger-DeWitt asymptotic expansion is given. The following chapters are devoted to the standard theory of the effective action and the geometric improvement due to Vilkovisky, the manifestly covariant quantization of gauge fields, zeta function regularization in mathematics and in quantum field theory, and the problem of boundary conditions in one-loop quantum theory. For this purpose, we study in detail Dirichlet, Neumann, and Robin boundary conditions for scalar fields, local and non-local boundary conditions for massless spin-1/2 fields, mixed boundary conditions for gauge fields, and gravitation. This is the content of Part I. Part II presents our investigations of Euclidean Maxwell theory, simple supergravity, and Euclidean quantum gravity. [Introduction to Special Functions for Applied Mathematics](#) Daniele Ritelli, 2025-09-25 [Introduction to Special Functions for Applied Mathematics](#) introduces readers to the topic of special functions with a particular focus on applications. Designed to build swiftly from the more basic special functions towards more advanced material, the book is ideally suited for

an intensive one semester course Complemented with various solved examples and exercises to support students and instructors the book can be used for both self study and directed learning Features Suitable for graduate level students or beginning PhD students in mathematics physics statistics and economics No previous background in complex analysis required Numerous solved examples and exercises *Journal and Proceedings of the Royal Society of New South Wales*, 1983 Includes list of members **CRC Concise Encyclopedia of Mathematics** Eric W.
