Range Multiplier Shift

The shifting is done without pressing the clutch pedal by shifting the lever under the steering wheel and is automatic when the tractor is under load. There are two positions with the two-stage range multiplier and three positions with the three stage multiplier.

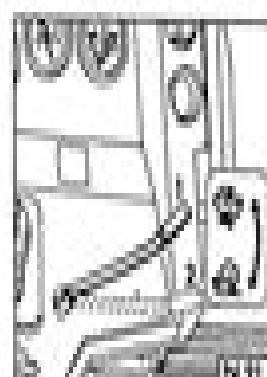

Reverse Shift

The shifting is done by moving the lever under the steering wheel. There are eight reverse gears available which are about the same speed as the forward speeds. Therefore the speed for driving backwards for a certain type of work has to be considered.

The reverse shifting is done with the clutch pedal pressed down and tractor still by moving the reverse lever to position 1. Operate the rest of the levers as described before.

47

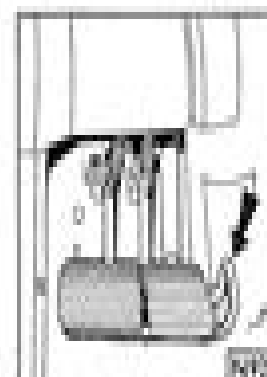

Forward Shift

For a certain type of work select the appropriate standard gear, 4R4/4R and only then shift the reverse gear.

The shifting is done with clutch pedal fully pressed down and with 4R4/4R still by moving the reverse lever to position 1.

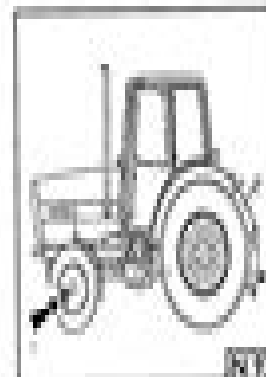

Front Brake

These brakes are of the pedal type that operate with the type hydraulic brakes with an automatic pressure regulator.

The two brake pedals must be locked together when driving on road. For the pedals intended for braking the left or right wheel only when working in ground or field.

## 4R5

Front Wheel Brake

These brakes are optional for front wheel driven tractors. If only one pedal is used to brake the tractor, the front drive brake is set in operation.
