Algal-based Waste Treatment Technologies in a Circular Economy Günay Yıldız Töre,Maulin P. Shah,2025-09-19 In recent years problems such as environmental pollution global warming and high energy consumption have brought waste treatment technologies to the forefront As the scientific world turns to sustainable environmentally friendly and ecologically sound energy sources microalgae based technologies have become one of the most intensely studied subjects in academia This book delves deeper into the emergence of microalgae as the green alternative that could lead the world toward adopting a circular economy and zero discharge approach With insights from professors and industry experts in the field this book provides new perspectives on the day to day environmental applications of microalgal technologies in waste treatment and management as well as recycling It also explores the environmental impact of traditional waste treatment and recovery technologies and highlights how algae based technologies can serve as an eco friendly alternative in microplastic removal and biofuel production This book equips readers with the essential knowledge on algae based phycoremediation technologies with special emphasis on their use in conventional treatment facilities to remove harmful contaminants and stabilize pH for effective bacterial treatment This is a valuable resource for environmentalists scientists and technologists around the world It will also be of interest to academics and students within the disciplines of Phycology Water Systems Engineering Environmental Science and Remediation and Sustainable Development

Nursing Management of Pediatric Disaster Catherine J. Goodhue,Nancy Blake,2020-05-13 This textbook describes what nurses need to know about pediatric disaster nursing including public policy and addresses preparedness for all types of disasters natural and man made and strategies for hospital school and community preparedness The book opens with a brief history of disaster nursing and explains the key differences between pediatric and adult disaster nursing Recent years have been marked by numerous man made and natural disasters which have led nurses to seek new resources to be better prepared in their role as nurses for all types of disasters Responding to this lack of resources the book focuses on the unique needs of babies and children It is the first and only textbook on pediatric disaster preparedness to include both the physical and psychological effects of disaster Key aspects covered include the psychosocial differences in and how to approach children family reunification medications supplies and equipment and decontamination Given its breadth of coverage the book is well suited as a textbook for nursing classes while also offering a valuable resource for nurses working in the field

Christian E. W. Steinberg,2025-08-11 Based on positive experiences in human nutrition and healthy aging individual and combined plant secondary metabolites are added to aquafeeds The main compounds used are carotenoids polyphenols terpenes and various alkaloids The pile of supplementation studies with beneficial results is growing rapidly These benefits include increased immunity pathogen resistance or improved gut microbiome diversity However a variety of adverse results cannot be ignored Overall in Aquatic Animal Nutrition research this is another area of that is still in its early stages as with supplementation of plant preparations Aquatic Animal Nutrition Plant Preparations a robust and guiding hypothesis for supplementation is not apparent and graded dosing is rarely used especially in the low dose range Often the high doses used lead to the classification of various compounds as anti nutritional However appropriate low dose supplementation demonstrates that and how aquatic animals can cope with anti nutritional factors within their adaptive response indicating that even these compounds may have some nutritional value In addition knowledge of the underlying mechanisms of the adaptive response may provide physiological transcript omic and epigenetic means to more sustainably utilize even this worthless food source The importance of the intestinal microflora is becoming increasingly clear and points to the imperative need to include gut microbiota in replacement studies Based on the few epigenetic studies currently available the importance of these processes is demonstrated The need to integrate such approaches into future studies is emphasized The so called hologenomics approach is inevitable Supplementing aquafeed with terrestrial plant material can introduce toxins and endocrine disruptors The addition of adsorptive compounds clay minerals or functional feed ingredients prebiotics probiotics can at least partially mitigate the adverse effects **Yachting** ,2006-06 **Optimization of Photovoltaic Power Systems**

Djamila Rekioua,Ernest Matagne,2012-01-03 Photovoltaic generation is one of the cleanest forms of energy conversion available One of the advantages offered by solar energy is its potential to provide sustainable electricity in areas not served by the conventional power grid Optimisation of Photovoltaic Power Systems details explicit modelling control and

optimisation of the most popular stand alone applications such as pumping power supply and desalination Each section is concluded by an example using the MATLAB and Simulink packages to help the reader understand and evaluate the performance of different photovoltaic systems Optimisation of Photovoltaic Power Systems provides engineers graduate and postgraduate students with the means to understand assess and develop their own photovoltaic systems As such it is an essential tool for all those wishing to specialise in stand alone photovoltaic systems Optimisation of Photovoltaic Power Systems aims to enable all researchers in the field of electrical engineering to thoroughly understand the concepts of photovoltaic systems find solutions to their problems and choose the appropriate mathematical model for optimising photovoltaic energy

Seafood Processing By-Products Se-Kwon Kim,2014-04-08 The seafood processing industry produces a large amount of by products that usually consist of bioactive materials such as proteins enzymes fatty acids and biopolymers These by products are often underutilized or wasted even though they have been shown to have biotechnological nutritional pharmaceutical and biomedical applications For example by products derived from crustaceans and algae have been successfully applied in place of collagen and gelatin in food cosmetics drug delivery and tissue engineering Divided into four parts and consisting of twenty seven chapters this book discusses seafood by product development isolation and characterization and demonstrates the importance of seafood by products for the pharmaceutical nutraceutical and biomedical industries

Grand Challenges in Algae Biotechnology Armin Hallmann,Pabulo H. Rampelotto,2020-01-02 In this book researchers and practitioners working in the field present the major promises of algae biotechnology and they critically discuss the challenges arising from applications Based on this assessment the authors explore the great scientific industrial and economic potential opened up by algae biotechnology The first part of the book presents recent developments in key enabling technologies which are the driving force to unleash the enormous potential of algae biotechnology The second part of the book focuses on how practical applications of algae biotechnology may provide new solutions to some of the grand challenges of the 21st century Algae offer great potential to support the building of a bio based economy and they can contribute new solutions to some of the grand challenges of the 21st century Despite significant progress algae biotechnology is yet far from fulfilling its potential How to unleash this enormous potential is the challenge that the own field is facing New cultivation technologies and bioprocess engineering allow for optimization of the operation strategy of state of the art industrial scale production systems and they reduce the production costs Parallel to this new molecular technologies for genetic and metabolic engineering of micro algae develop quickly The optimization of existing biochemical pathways or the introduction of pathway components makes high yield production of specific metabolites possible Novel screening technologies including high throughput technologies enables testing of extremely large numbers of samples and thus allow for large scale modelling of biomolecular processes which would have not been possible in the past Moreover profitable production can demand for integrated biorefining which combines consecutive processes and
