Johnson, Robert R. Krueger, 2023-06-14 Date palm *Phoenix dactylifera* L is a tree belonging to the palm family Arecaceae and is cultivated for its sweet edible fruits Over the past century it has become a major commercial fruit crop and a key component of agricultural

production in the world's subtropical arid and semiarid regions. A crop suited both to the low input small farmer and the modern high input commercial plantation, the date palm provides a livelihood for millions of people living in marginal land areas where farming options are restricted. Date palm is mainly grown for its fruits but the whole tree is utilized. Research into date palm improvement for fruit production in recent decades has brought about improved elite cultivars, stress and pathogen resistance, and enhanced postharvest technologies. These developments have led to revised recommendations for date palm producers and increased opportunity to promote novel fruit products. With contributions from leading international experts, this is a valuable resource for researchers and students in horticulture as well as date palm growers and processors.
