Reinforced Concrete with Worked Examples Franco Angotti, Matteo Guiglia, Piero Marro, Maurizio

Orlando, 2022-06-07 This textbook describes the design of reinforced and prestressed concrete structures according to the latest advances both in the field of materials concrete and steel and in the field of structural analysis These advances have been included in current version of Eurocode 2 which is taken as reference All subjects are presented starting from their theoretical bases and passing to corresponding EC2 formulations A large part of the book is concerned with the most innovative EC2 parts like nonlinear structural analyses second order effects punching and strut and tie models The textbook is equipped with numerous worked examples useful for the reader who is not familiar with the design of reinforced and prestressed concrete structures by the Limit State Method Examples have been chosen among the most frequent cases of the professional practice Thanks to this structure it can be of interest both to structural designers for their professional training and to students of engineering and architecture schools for their studies The volume contains twelve chapters which follow the same structure of EC2 except for chapter 6 dealing with prestressed concrete structures which does not match any chapter of EC2 as prestressed concrete is considered in EC2 as a particular case of reinforced concrete and corresponding formulations are shed over different chapters

Design Aids for Eurocode 2 The Concrete Societies of The UK, The Netherlands and Germany, 2003-09-02 Eurocode 2 is the key document for future structural design in concrete throughout Europe To use the Code effectively structural engineers need a range of aids in the form of flow charts design charts and simplified procedures This book provides all of these and is written with the authority of collaborative work by members of the Concrete Societies of the UK the Netherlands and Germany The preparation of the book has been funded under the SPRINT European Community programme for innovation and technology transfer

Structural Concrete, Volume 2 fib Fédération internationale du béton, 2010-01-01 The second edition of the Structural Concrete Textbook is an extensive revision that reflects advances in knowledge and technology over the past decade It was prepared in the intermediate period from the CEP FIP Model Code 1990 MC90 to fib Model Code 2010 MC2010 and as such incorporates a significant amount of information that has been already finalized for MC2010 while keeping some material from MC90 that was not yet modified considerably The objective of the Textbook is to give detailed information on a wide range of concrete engineering from selection of appropriate structural system and also materials through design and execution and finally behaviour in use The revised fib Structural Concrete Textbook covers the following main topics phases of design process conceptual design short and long term properties of conventional concrete including creep shrinkage fatigue and temperature influences special types of concretes such as self compacting concrete architectural concrete fibre reinforced concrete high and ultra high performance concrete properties of reinforcing and prestressing materials bond tension stiffening moment curvature confining effect dowel action aggregate interlock structural analysis with or without time dependent effects definition of limit

states control of cracking and deformations design for moment shear or torsion buckling fatigue anchorages splices detailing design for durability including service life design aspects deterioration mechanisms modelling of deterioration mechanisms environmental influences influences of design and execution on durability fire design including changes in material and structural properties spalling degree of deterioration member design linear members and slabs with reinforcement layout deep beams management assessment maintenance repair including conservation strategies risk management types of interventions as well as aspects of execution quality assurance formwork and curing The updated Textbook provides the basics of material and structural behaviour and the fundamental knowledge needed for the design assessment or retrofitting of concrete structures It will be essential reading material for graduate students in the field of structural concrete and also assist designers and consultants in understanding the background to the rules they apply in their practice Furthermore it should prove particularly valuable to users of the new editions of Eurocode 2 for concrete buildings bridges and container structures which are based only partly on MC90 and partly on more recent knowledge which was not included in the 1999 edition of the Textbook

Design of Prestressed Concrete to Eurocode 2 Raymond Ian Gilbert, Neil Colin Mickleborough, Gianluca Ranzi, 2017-01-27 The design of structures in general and prestressed concrete structures in particular requires considerably more information than is contained in building codes A sound understanding of structural behaviour at all stages of loading is essential This textbook presents a detailed description and explanation of the behaviour of prestressed concrete members and structures both at service loads and at ultimate loads and in doing so provide a comprehensive and up to date guide to structural design Much of the text is based on first principles and relies only on the principles of mechanics and the properties of concrete and steel with numerous worked examples However where the design requirements are code specific this book refers to the provisions of Eurocode 2 Design of Concrete Structures and where possible the notation is the same as in Eurocode 2 A parallel volume is written to the Australian Standard for Concrete Structures AS3600 2009 The text runs from an introduction to the fundamentals to in depth treatments of more advanced topics in modern prestressed concrete structures It suits senior undergraduate and graduate students and also practising engineers who want comprehensive introduction to the design of prestressed concrete structures It retains the clear and concise explanations and the easy to read style of the first edition but the content has been extensively re organised and considerably expanded and updated New chapters cover design procedures actions and loads prestressing systems and construction requirements connections and detailing and design concepts for prestressed concrete bridges The topic of serviceability is developed extensively throughout All the authors have been researching and teaching the behaviour and design of prestressed concrete structures for over thirty five years and the proposed new edition of the book reflects this wealth of experience The work has also gained much from Professor Gilbert active and long time involvement in the development of standards for concrete buildings and concrete bridges

Structural Concrete Textbook Vol. 1, first edition fib Fédération internationale du béton, 1999-01-01 The development of reinforced and prestressed concrete during the last 50 years was highly promoted by the Comité Euro international du Béton CEB and the Fédération Internationale de la Précontrainte FIP In 1998 these two associations merged

forming the Fédération Internationale du Béton (fib). The results of CEB and FIP had been distributed in different ways such as CEB Bulletins and Information FIP Reports FIP Notes and CEB News. These Bulletins or reports comprised various kinds of information such as State of the Art Reports Research Reports Application Manuals Guides to Good Practice and the CEB FIP Model Codes 1978 and 1990. These Model Codes provided design principles and application rules to the structural engineering profession and have been predominantly used for code drafting by many national and international standardizing bodies. The Textbook on Structural Concrete is now intended to provide background information and justification especially for the CEB FIP Model Code 90 and in some fields of recently extended knowledge. It is addressed to advanced students; this means that basic information on structural analysis and behaviour of structural concrete is a required prerequisite. Practising structural engineers may utilize it for gaining background information on the CEB FIP Model Code 90 and national or regional codes as for ex EUROCODE 2 based on MC 90. The Textbook is also conceived to assist teachers at technical universities or engineering schools to achieve better understanding of the recent theories on structural concrete. Having these targets in mind, the General Assembly of CEB decided already in 1995 to set up a Special Activity Group Dissemination of Knowledge to realise that work. The authors invited to draft the different chapters had been mostly involved already in drafting the Model Code 90. In this way consistent information could be provided both for the code and the textbook. Each chapter has been thoroughly discussed and commented within the Special Activity Group 2. This textbook was first presented to fib members during the Technical Activity Workshop in October 1999 in Prague held in connection with the first fib symposium. The authors are looking forward to receiving comments from various corners.

Volume 2 of the Handbook covers the geotechnical procedures used in manufacturing anchors and piles as well as for improving or underpinning foundations securing existing constructions controlling ground water excavating rocks and earth works. It also treats such specialist areas as the use of geotextiles and seeding.

Reinforced Concrete Design to Eurocode 2 Giandomenico Toniolo, Marco di Prisco, 2017-05-09. This textbook describes the basic mechanical features of concrete and explains the main resistant mechanisms activated in the reinforced concrete structures and foundations when subjected to centred and eccentric axial force bending moment shear torsion and prestressing. It presents a complete set of limit state design criteria of the modern theory of RC incorporating principles and rules of the final version of the official Eurocode 2. This textbook examines methodological more than notional aspects of the presented topics focusing on the verifications of assumptions the rigorousness of the analysis and the consequent degree of reliability of results. Each chapter develops an organic topic which is eventually illustrated by examples in each final paragraph containing the relative numerical applications. These practical end of chapter appendices and intuitive flow charts ensure a smooth learning experience. The book stands as an ideal learning resource for students of structural design and analysis courses in civil engineering building construction and architecture as well as a valuable reference for concrete
