Something Incredibly Wonderful Happens K.C. Cole,2024-05-31 How do we reclaim our innate enchantment with the world And how can we turn our natural curiosity into a deep abiding love for knowledge Frank Oppenheimer the younger brother of the physicist J Robert Oppenheimer was captivated by these questions and used his own intellectual inquisitiveness to found the Exploratorium a powerfully influential museum of human awareness in San Francisco that encourages play creativity and discovery all in the name of understanding In this elegant biography K C Cole investigates the man behind the museum with sharp insight and deep sympathy The Oppenheimers were a family with great wealth and education and Frank like his older brother pursued a career in physics But while Robert was unceasingly ambitious and eventually came to be known for his work on the atomic bomb Frank s path as a scientist was much less conventional His brief fling with the Communist Party cost him his position at the University of Minnesota and he

subsequently spent a decade ranching in Colorado before returning to teaching. Once back in the lab, however, Frank found himself moved to create something to make the world meaningful after the bombing of Hiroshima and Nagasaki. He was inspired by European science museums and he developed a dream of teaching Americans about science through participatory museums. Thus was born the magical world of the Exploratorium, forever revolutionizing not only the way we experience museums but also science education for years to come. Cole has brought this charismatic and dynamic figure to life with vibrant prose and rich insight into Oppenheimer as both a scientist and an individual. *Cosmodernism* Christian Moraru, 2011. Communicate more effectively about science by taking a page from Hollywood and improving your storytelling skills. Ask a scientist about Hollywood and you'll probably get eye rolls. But ask someone in

Hollywood about science and they'll see dollar signs. Movie makers know that science can be the source of great stories with all the drama and action that blockbusters require. That's a huge mistake, says Randy Olson. Hollywood has a lot to teach scientists about how to tell a story and ultimately how to do science better. With *Houston We Have a Narrative*, he lays out a stunningly simple method for turning the dull into the dramatic. Drawing on his unique background, which saw him leave his job as a working scientist to launch a career as a filmmaker, Olson first diagnoses the problem. When scientists tell us about their work, they pile one moment and one detail atop another moment and another detail, a stultifying procession of and and and. What we need instead is an understanding of the basic elements of story, the narrative structures that our brains are all but hardwired to look for, which Olson boils down brilliantly to *And But Therefore* or *ABT*. At a stroke, the *ABT* approach introduces momentum, *And*, conflict, *But*, and resolution. Therefore, the fundamental building blocks of story. As Olson has shown by leading countless workshops worldwide, when scientists' eyes are opened to *ABT*, the effect is staggering. Suddenly, they're not just talking about their work; they're telling stories about it. And audiences are captivated. Written with an uncommon verve and enthusiasm and built on principles that are applicable to fields far beyond science, *Houston We Have a Narrative* has the power to transform the way science is understood and appreciated and ultimately how it's done.
