Our Deepest Desires Gregory E. Ganssle, 2017-08-01 As human beings we are created with universal longings. Where can our restless hearts find fulfillment? Philosopher and apologist Greg Ganssle argues that our widely shared human aspirations are best understood in the light of the Christian story and that the good news of Jesus Christ makes sense of and fulfills our deepest desires.

The End of the Timeless God R. T. Mullins, 2016-01-07 The claim that God is timeless has been the majority view throughout church history. However, it is not obvious that divine timelessness is compatible with fundamental Christian doctrines such as creation and incarnation. Theologians have long been aware of the conflict between divine timelessness and Christian doctrine, and various solutions to these conflicts have been developed. In contemporary thought, it is widely agreed that new theories on the nature of time can further help solve these conflicts. Do these solutions actually solve the conflict? Can the Christian God be timeless? The End of the Timeless God sets forth a thorough investigation into the Christian understanding of God and the God-world relationship. It argues that the Christian God cannot be timeless.

Few philosophers have devoted more than passing attention to similarities between the thought of Søren Kierkegaard a Danish Christian and Emmanuel Levinas a French Jew Here one of philosophy of religion s most distinctive voices offers a sustained comparison Focusing on questions surrounding otherness transcendence postmodernity and the nature of religious thought Merold Westphal draws readers into a dialogue between the two thinkers Westphal s masterful command of both philosophies shows that each can learn from the other Levinas and Kierkegaard in Dialogue is an insightful and accessible contribution to philosophical considerations of ethics and religion **Heidegger in the Islamicate World** Kata Moser,Urs Gösken,Josh Michael Hayes,2019-02-28

The Environment and

International Politics Hakan Seckinelgin, 2005-11-17 This new study shows how environmental issues represent a deep problem in conceptualising the relationship between human beings and nature This key relationship grounds the implicit ethical and political concerns of International Relations and our understandings of environmental politics It demonstrates that the core theoretical orientations of the study of International Relations are not only incapable of understanding and responding to contemporary problems but are profoundly complicit in creating the ecological problems in the first place This major book develops a sense of these realities based on the thinking of Martin Heidegger It forwards new ways of rethinking the environmental questions and addresses crucial issues such as sovereignty the International Law of The Sea the Kyoto Protocol Northern Alaskan oil exploration and exploitation and the impact of the United Nations Convention on the Law of The Sea III This is essential specialist reading for readers concerned with the environment

From Darwinian

Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection Paradoxically Darwins theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher s Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics Publisher s description
