The Rotarian, 1943-04 Established in 1911 The Rotarian is the official magazine of Rotary International and is circulated worldwide Each issue contains feature articles columns and departments about or of interest to Rotarians Seventeen Nobel Prize winners and 19 Pulitzer Prize winners from Mahatma Ghandi to Kurt Vonnegut Jr have written for the magazine

Enough for One Lifetime Matthew E. Hermes, 1996 This is a story of invention and chemistry and the ineluctable fate of the inventor of nylon Wallace Carothers was hired by DuPont in 1928 to lead a program called basic research Carothers brought a passion to his work and wanted to synthesize large molecules that would challenge Emil Fischer's largest molecule of 4200 molecular weight In a burst of creativity in the spring of 1930 Carothers gave us our first truly synthetic rubber and fiber The rubber quickly became neoprene the fiber in time led to nylon Carothers took an infant science called polymer chemistry defined it and guided it toward its present maturity He gave us condensation polymerization Hermes tells Carothers story his sudden dramatic research successes and his relentless slide into depression alcohol and suicide through Carothers revealing letters to his professional colleagues Roger Adams C S Marvel John R Johnson and his family and college classmates At the end Carothers habit was to hide himself from his co workers and friends Hermes narrative searches for the shrouded heart of the inventor's story by using stories of F Scott Fitzgerald and other contemporaries as parables from which Carothers truth may be drawn This Chemical Age Williams Haynes, 1942 **Chemistry in America 1876-1976 A.**

Thackray, J.L. Sturchio, P.T. Carroll, R.F. Bud, 2012-12-06 This study is an outgrowth of our interest in the history of modern chemistry The paucity of reliable quantitative knowledge about past science was brought home forcibly to us when we undertook a research seminar in the comparative history of modern chemistry in Britain Germany and the United States That seminar which took place at the University of Pennsylvania in the spring of 1975 was paralleled by one devoted to the work of the Annales School The two seminars together catalyzed the attempt to construct historical measures of change in aspects of one science or chemical indicators The present volume displays our results Perhaps our labors may be most usefully compared with the work of those students of medieval science who devote their best efforts to the establishment of texts Only when acceptable texts have been constructed from fragmentary and corrupt sources can scholars move on to the more satisfying business of making history So too in the modern period a necessary preliminary to the full history of any scientific profession is the establishing of reliable quantitative information in the form of statistical series This volume does not offer history Instead it provides certain element indicators that may be useful to individuals interested in the history of American chemistry and chemical industry and suggestive for policy **National Science Board**, 1982 Manufacturing David O. Whitten, Bessie E. Whitten, 1990-09-27 Overall this first volume in the series should render business research in manufacturing a good deal easier by bringing together insightful industry histories and detailed critical bibliographies This series has much to recommend it Future volumes will be eagerly awaited Reference Books Bulletin This historical and

bibliographical reference work is the first volume of Greenwood Press's Handbook of American Business History a series intended to supplement current bibliographic materials pertaining to business history Devoted to manufacturing this work uses the Enterprise Standard Industrial Classification ESIC to divide the subject into distinct segments from which contributors have developed histories and bibliographies of the different types of manufacturing Though authors were given sets of guidelines to follow they were also allowed the flexibility to work in a format that best suited the material Each contribution in this volume contains three important elements a concise history of the manufacturing sector a bibliographic essay and a bibliography Some contributions appear in three distinct parts while others are combined into one or two segments all build on currently available material for students and scholars doing research on business and industry The contributors who include business economic and social historians as well as engineers and lawyers have covered such topics as bakery products industrial chemicals and synthetics engines and turbines and household appliances Also included are an introductory essay that covers general works and a comprehensive index This book should be a useful tool for courses in business and industry and a valuable resource for college university and public libraries

Applied Imagination - Principles and Procedures of Creative Writing Alex Osborn, 2012-10-19 The purpose of this book is to present the principles and procedures of creative thinking Chapters included are the all importance of imagination indispensability of creativity in science Many of the earliest books particularly those dating back to the 1900s and before are now extremely scarce and increasingly expensive We are republishing these classic works in affordable high quality modern editions using the original text and artwork

Governing Risks in Modern Britain Tom Crook, Mike Esbester, 2016-04-26 For more than 200 years everyday life in Britain has been beset by a variety of dangers from the mundane to the life threatening Governing Risks in Modern Britain focuses on the steps taken to manage these dangers and to prevent accidents since approximately 1800 It brings together cutting edge research to help us understand the multiple and contested ways in which dangers have been governed It demonstrates that the category of risk broadly defined provides a new means of historicising some key developments in British society Chapters explore road safety and policing environmental and technological dangers and occupational health and safety The book thus brings together practices and ideas previously treated in isolation situating them in a common context of risk related debates dilemmas and difficulties Doing so it argues advances our understanding of how modern British society has been governed and helps to set our risk obsessed present in some much needed historical perspective

Chemistry, Society and Environment Colin Archibald Russell, Royal Society of Chemistry (Great Britain), 2000

There have been several attempts to write the history of Britain's chemical industry as a whole and countless others concentrating on individual companies. Some have looked at the technical aspects of the industry whilst others have addressed economic issues. Few have however attempted to analyse the effects of the chemical industry on society in general. The current environmental crisis can only be fully understood in the light of its history. This is the first such book to look critically at the whole development of industrial chemistry in the UK in the context of its effects on the environment. No one from industry, government or academia can afford to be unaware of the historical roots of our present dilemma. Industrial chemists can take heart from the realization that their predecessors were remarkably aware of the problems and often found satisfactory solutions. Industrial chemistry has traditionally been seen as the great polluter. Without any attempts at whitewash, this book puts the record straight. From academic chemist to industrialist to politician, Chemistry Society and Environment. A New History of the British Chemical Industry will be of relevance to all those concerned with the social and environmental impact of the chemical industry. **Managing the Unknown** Frank Uekötter, Uwe Lübken, 2014-03-01

Information is crucial when it comes to the management of resources. But what if knowledge is incomplete or biased or otherwise deficient? How did people define patterns of proper use in the absence of cognitive certainty? Discussing this challenge for a diverse set of resources from fish to rubber, these essays show that deficient knowledge is a far more pervasive challenge in resource history than conventional readings suggest. Furthermore, environmental ignorance does not inevitably shrink with the march of scientific progress; these essays suggest more of a dialectical relationship between knowledge and ignorance that has different shapes and trajectories. With its combination of empirical case studies and theoretical reflection, the essays make a significant contribution to the interdisciplinary debate on the production and resilience of ignorance. At the same time, this volume combines insights from different continents as well as the seas in between and thus sketches outlines of an emerging global resource history. *Synthetic Worlds* Esther Leslie, 2006-01-16

This revealing study considers the remarkable alliance between chemistry and art from the late eighteenth century to the period immediately following the Second World War. *Synthetic Worlds* offers fascinating new insights into the place of the material object and the significance of the natural, the organic and the inorganic in Western aesthetics. Esther Leslie considers how radical innovations in chemistry confounded earlier alchemical and Romantic philosophies of science and nature while profoundly influencing the theories that developed in their wake. She also explores how advances in chemical engineering provided visual artists with new colors, surfaces, coatings and textures, thus dramatically recasting the way painters approached their work. Ranging from Goethe to Hegel, Blake to the Bauhaus, *Synthetic Worlds* ultimately considers the astonishing affinities between chemistry and aesthetics more generally. As in science, progress in the arts is always assured because the impulse to discover is as immutable and timeless as the drive to create. Domestic Commerce United States.
