Morgan,2007-09-30 In October 2004 more than eight million citizens of Afghanistan turned out to vote in the first democratic election in the turbulent 5 000 year history of the country This incredible voter turnout in the face of horrific threats and actual bullets rockets and bombs was a shout of defiance and a significant setback to the former Taliban regime and their al Qaeda allies It was a stunning success and serious step forward for the Afghan people and for the United States in the campaign against international terrorism The change is more dramatic than the American Revolution in the aftermath of which the new American democracy maintained a representative form of government similar to its British roots The change is also more positive than the French Revolution which degenerated into tyranny and anarchy The Afghan Revolution of democratic governance albeit aided and guided by international military and political powers is thus one of the most historic events of our time Written by a former U S Army intelligence officer this book provides readers with a candid account of Afghanistan s first presidential election and its subsequent transition to democratic self governance In particular Morgan speaks to the security apparatus and the measures

Computational Materials Chemistry L.A. Curtiss,M.S. Gordon,2006-01-16 As a result of the advancements in algorithms and the huge increase in speed of computers over the past decade electronic structure calculations have evolved into a

valuable tool for characterizing surface species and for elucidating the pathways for their formation and reactivity. It is also now possible to calculate including electric field effects STM images for surface structures. To date the calculation of such images has been dominated by density functional methods primarily because the computational cost of curate wave function based calculations using either realistic cluster or slab models would be prohibitive. DFT calculations have proven especially valuable for elucidating chemical processes on silicon and other semiconductor surfaces. However it is also clear that some of the systems to which DFT methods have been applied have large non dynamical correlation effects which may not be properly handled by the current generation of Kohn Sham based density functionals. For example our CASSCF calculations on the Si 001 acetylene system reveal that at some geometries there is extensive 86 configuration mixing. This in turn could signal problems for DFT cal lations on these systems. Some of these problem systems can be addressed using ONIOM or other layering methods treating the primary region of interest with a CASMP2 or other multireference based method and treating the secondary region by a lower level of electronic structure theory or by use of a molecular mechanics method.

Lives in Sydney, Australia, rides a bike everywhere, is a compulsive hiker and is eternally curious. In *first we make the beast beautiful*, Sarah directs her intense focus and fierce investigatory skills onto this lifetime companion of hers, looking at the triggers and treatments, the fashions and fads. She reads widely and interviews fellow sufferers, mental health experts, philosophers and even the Dalai Lama, processing all she learns through the prism of her own experiences. Sarah pulls at the thread of accepted definitions of anxiety and unravels the notion that it is a difficult, dangerous disease that must be medicated into submission. Ultimately, she re frames anxiety as a spiritual quest rather than a burdensome affliction, a state of yearning that will lead us closer to what really matters. Practical and poetic, wise and funny, this is a small book with a big heart. It will encourage the myriad sufferers of the world s most common mental illness to feel not just better about their condition but delighted by the possibilities it offers for a richer, fuller life. **MORE PRAISE FOR FIRST WE MAKE THE BEAST BEAUTIFUL** at once a nomadic journey, a cri de coeur and a compendium of hard won wisdom.
