Human centredness A Challenge to Post industrial Europe The key power in industrial society has been linked to the possession of capital and factory In the information society it could be rather different If one accepts that that the key power in the information society will be linked not so much to the ownership of information but to human creativity nourished by that information the productive force of today and tomorrow could be more and more the human brain Making use of one s intelligence is always accompanied by positive emotion which in turn further activates the intelligence But unfortunately under present conditions workers of all levels live in fear anxiety and stress rather than desire and motivation The question of basic human ecology quality of life is therefore a major strategic factor It is precisely the opposite to the mechanisms of exclusion that currently dominate our society exclusion of young people through joblessness but also exclusion through technology as with the helplessness of older people or the poorly educated confronted with ticket dispensing machines or other automats This is not idle theorizing it corresponds to concrete facts It is for example how some observers interpret the crisis at IBM Because its programs were less human friendly it was shaken to its foundations by Apple and Microsof though it seems since to have learnt its lesson **Beyond Broadband Access** Richard D. Taylor,Amit M. Schejter,2013-07-01 After broadband access what next What role do metrics play in understanding information societies And more important in shaping their policies Beyond counting people with broadband access how can economic and social metrics inform broadband policies help evaluate their outcomes and create useful models for achieving national goals This timely volume not only examines the

Innovation Networks and Learning Regions?

James Simme, 2004-08-02 Innovation Networks and Learning Regions address key issues of understanding in contemporary economic geography and local economic policy making in cities and regions in the advanced economies Developing the idea that innovation is the primary driving force behind economic change and growth the international range of contributors stress the importance of knowledge and information as the raw materials of innovation They examine the ways in which these elements may be acquired and linked through networks and demonstrate that there are empirical examples of innovative areas which do not have highly developed networks yet appear to be relatively successful in terms of local economic growth In so doing they raise crucial questions about the ways in which regions or localities might be described as truly learning areas and about the sustainability of future economic and quality of life success based on innovation and high technology
