Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28

Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language. We are not born with an innate ability to read. A reading system of mental representations that enables us to read must be formed in the brain. Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols (letters in print, words) with pre-existing phonological sound and semantic comprehension cognitive systems for language. Although spelling draws on the same representational knowledge base and is usually correlated with reading, the acquisition processes involved are not quite the same. Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography. Reading, on the other hand, requires only the recognition of a word for pronunciation. Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions. Most children learn to read and spell their language at the same time; thus the co-ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and/or spelling is also a major issue of concern for parents and teachers, necessitating a cross-disciplinary approach to the problem encompassing major efforts from researchers in neuroscience, cognitive science, experimental psychology, and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical, computational, and empirical works that focus on the acquisition of literacy, including cross-orthographic research.

The Vocabulary Book Michael F. Graves, 2006

This text presents a comprehensive plan for vocabulary instruction from kindergarten through high school, one broad enough to instruct students with small vocabularies, exceptional vocabularies, and every child in between. Written by one of the top experts in the field, this practical book presents a research-based program with plenty of classroom examples and strategies that teachers can use. The comprehensive plan includes four parts: rich and varied language experiences; teaching individual words; teaching word learning strategies; and

fostering word consciousness **Teaching Words and How They Work** Elfrieda H. Hiebert, 2019-12-06 Research shows that vocabulary is the best support for students' comprehension of narrative and information texts. Often vocabulary instruction focuses on a few target words in specific texts. However, to understand the many new words in complex texts, students need to know how words work. This book, written by an award-winning authority on reading instruction, shows teachers how to make small changes to teach more words and also how words work. Many of these small changes involve enrichments to existing vocabulary practices such as word walls and conversations with students. Each chapter includes descriptions of teachers' implementation of small changes to support big gains in students' vocabulary. This book, which has sufficient depth in research and theory for graduate and undergraduate courses in vocabulary instruction, also offers practical steps that K-8 teachers can use in any reading program to help all students grow their vocabulary. *Teaching Words and How They Work* shows teachers how to identify the most important word families to teach, teach students to use opening text as background knowledge for comprehending the rest of the text, use word walls with more purpose and greater student engagement, select the right words to teach from new information texts, better understand limitations of leveled texts and how to adjust, use assets and address challenges to support English learners. Vocabulary Assessment to Support Instruction Margaret G. McKeown, Paul D. Deane, Renée R. Lawless, 2017-07-18 The importance of teaching and assessing vocabulary. A new perspective for thinking about vocabulary. Surveying the state of vocabulary assessment. Which words and word meanings should we teach and assess? How should we assess vocabulary? Classroom practices for vocabulary instruction. The role of technology to support adaptive, flexible, and scalable assessments. Resources for developing a nation of word learners.

Content Area Reading and Writing Norman Unrau, 2004 This theory-based, strategy-driven approach to teaching content area and secondary reading keeps an eye on the cultural issues affecting secondary students while emphasizing reflective practice to promote the most effective teaching. Chapters on assessment, motivation, struggling readers, aligning standards with strategies and assessment, and a constant focus on diversity set this text apart. Frequent opportunities for readers to apply the concepts they are learning help to make this a truly informative text. SPECIAL FEATURES INCLUDE Step by Step features which precisely explain a strategy's implementation. Plenty of simple and effective strategies for assessing and addressing students' reading capabilities. A strong focus on standards that shows beginning teachers how to integrate literacy goals with content standards. An abundance of student work samples to fully illustrate chapter concepts, strategies, and effective teaching. A Companion Website available at www.prenhall.com/unrau containing self-assessments, web links, and classroom video footage to round out content comprehension.

Mental Lexicon Patrick Bonin, 2004 This book is about the mental lexicon and opens an understanding of this aspect of human cognition. The mental lexicon is still a central topic in psycholinguistics and more generally speaking in cognitive science. Is it possible to define what is intended by the expression mental lexicon, a concept coined by Oldfield as

early as 1966 Are the terms that the authors have at their disposal still sufficient to discuss this hypothesised mental entity the mental lexicon which is intended to cover many different aspects of words The authors propose as a working definition that the mental lexicon corresponds to the mental repository of all representations that are intrinsically related to words This book extends its research in psycholinguistics and focuses on the word

Evidence-based Reading Practices for Response to Intervention Diane Haager,Janette K. Klingner,Sharon Vaughn,2007 A look at the research about the Three Tier Approach a core reading program supplementary instruction and intensive intervention

Finding the Right Texts Elfrieda H. Hiebert,Misty Sailors,2009-01-01 Until now no single volume has comprehensively examined the crucial question of how to select the most appropriate reading material for beginning or struggling readers From leading authorities this book meets an important need by reviewing the best available research on the role of specific text features a including linguistic and conceptual content a in supporting the development of proficient reading Also explored are ways that teacher scaffolding can help students who have difficulties with particular aspects or types of texts The book considers approaches to adapting the design and selection of texts to reinforce reading skills and provide well paced challenges for Ka 6 students at a variety of ability levels
