Human Ascent Henry Gobus, 101-01-01

Human Ascent overturns the traditional Darwinian view of evolution as a mechanical struggle for survival In this groundbreaking work psychologist Henry Gobus argues that life evolves not through competition but through the reduction of instinct and the rise of emotional attachment Love empathy and connection not aggression or dominance are the true engines of change and intelligence For readers of Charles Darwin s *On the Origin of Species* Richard Dawkins *The Selfish Gene* Yuval Noah Harari s *Sapiens* E O Wilson s *The Social Conquest of Earth* or Carl Jung s *Modern Man in Search of a Soul* Human Ascent offers a radical and unifying alternative evolution as an emotional and intelligent journey revealing how attachment and compassion have guided life s unfolding from its earliest beginnings Bridging psychology biology and philosophy Gobus redefines evolution as a process of increasing emotional depth where empathy becomes intelligence and connection becomes survival Human Ascent illuminates the origins of consciousness mental health and moral awareness offering a new foundation for education psychology and social reform

Reviews Dr Daniel Gileppa Consultant Psychiatrist

Initially sceptical as a Dawkins enthusiast Dr Gileppa I was impressed with the parallels Mr Gobus has drawn between this particular concept and evolution and how he can set out his arguments in a way that can engage all levels of knowledge from novice to advanced The thing that most amazes me however is that nobody has made the comparison before It s something that is not immediately apparent but seems so obvious once it s pointed out I do not doubt that it will be zealously critiqued particularly by those who have an interest in maintaining a conflicting opinion but personally I m converted

Mark Ruge

Connect Magazine Ruge describes Human Ascent as a compelling and convincing alternative to Darwin s theory He praises Gobus for showing that random mutations do not drive evolution but by the growth of intelligence through emotional attachment He highlights how the theory explains gaps in Darwin s model accounts for complex shifts in reproduction and

even addresses humanity's paradoxical mix of brilliance and fragility Ruge calls it an exciting and ground breaking book well worth reading Why Read Human Ascent Challenges Darwin's traditional model of evolution Introduces Attachment Theory of Evolution where emotional bonds drive intelligence Backed by research case studies and fresh insights from psychology Praised by independent reviewers and a practising psychiatrist Access to Health Rebecca J. Donatelle, Lorraine G. Davis, 1994 This third edition provides a thorough and comprehensive coverage of health and well being concepts and theory while also providing the tools and strategies to empower students to make responsible decisions about their personal health and the health of their community and world Changes in this edition reflect results of extensive market research in the personal health market These include new coverage of health behaviours and violence and renewed emphasis on managing behaviour to affect healthy lifestyles The Unexpected Journey of Caring Donna Thomson, Zachary White, 2019-06-05 With a foreword by Judy Woodruff The Unexpected Journey of Caring is a practical guide to finding personal meaning in the 21st century care experience Personal transformation is usually an experience we actively seek out not one that hunts us down Becoming a caregiver is one transformation that comes at us requiring us to rethink everything we once knew Everything changes responsibilities beliefs hopes expectations and relationships Caregiving is not just a role reserved for saints eventually everyone is drafted into the caregiver role It's not a role people medically train for it's a new type of relationship initiated by a loved one's need for care And it's a role that cannot be quarantined to home because it infuses all aspects of our lives Caregivers today find themselves in need of a crash course in new and unfamiliar skills They must not only care for a loved one but also access hidden community resources collaborate with medical professionals craft new narratives consistent with the changing nature of their care role coordinate care with family seek information and peer support using a variety of digital platforms and negotiate social support all while attempting to manage conflicts between work life and relationship roles The moments that mark us in the transition from loved one to caregiver matter because if we don't make sense of how we are being transformed we risk undervaluing our care experiences denying our evolving beliefs becoming trapped by other's misunderstandings and feeling underappreciated burned out and overwhelmed Informed by original caregiver research and proven advocacy strategies this book speaks to caregiving as it unfolds in all of its confusion chaos and messiness Readers won't find well intentioned clichés or care stereotypes in this book There are no promises to help caregivers return to a life they knew before caregiving No this book greets caregivers where they are in their journey new or chronic not where others expect or want them to be Close Encounters Laura K. Guerrero, Peter A. Andersen, Walid A. Afifi, 2010-11-03 New edition of this popular introduction to interpersonal communication *Efficient and Flexible Reading* Kathleen T. McWhorter, 1998 This book presents techniques and guided practice that will enable readers to accomplish reading tasks within an efficient and realistic framework New chapters on visuals teach students how to read and interpret visuals and graphics maps tables pie charts diagrams etc and how to use Internet electronic resources and multimedia study aids

More than 75 new exercises are included **The Painted Mind** Alfonso Troisi, 2017 The Painted Mind combines art and science Its scientific focus is on the evolutionary study human mind and behavior and each chapter is inspired by a masterpiece painting reproduced accurately and in full color Throughout the book Dr Troisi integrates discussion of each painting s artistic significance with theories of the human mind s evolution *Showing Off* Philip L. Wagner, 2010-01-01 Hardly a place exists on earth that has not been shaped in some way by human beings Every day we modify and even sweep away natural landscapes as we build places to live and work But why we react and interact as social beings intent on exercising ecological dominance poses an endlessly compelling puzzle for everyone from novelists to geographers In *Showing Off* distinguished geographer Philip L Wagner offers a persuasive hypothesis Drawing on a lifetime of inquiry travel and teaching he asserts that the strive for Geltung personal standing recognition acceptance esteem and influence shapes all of our interactions and defines the unique social character of human beings Wagner applies the Geltung hypothesis to a wide range of human activities from falling in love and spreading gossip to buying goods and making war His examples demonstrate how communication and display showing off impel geographic change as they reveal how and why people with the most Geltung tend to occupy the most desirable places This broad vision draws insights from many fields A major contribution to cultural geography the book also sheds new light on individual psychology and psychopathology and suggests new themes for cognitive science and even philosophy Sure to stir lively debate in many circles it will be provocative reading for everyone fascinated by the continuum between people and places **The London Lancet** , 1860
