VirtualBox Made Easy James Bernstein, 2020 Information Technology has come a long way in the past 5 10 years and one of the greatest advancements in this field has to be that of virtualizing computers and servers in order to save IT administrators a lot of time and their companies a lot of money when it comes to building their backend systems And now we can even go beyond virtualizing computers and virtualize our networks as well Because virtualization allows us to run multiple computers machines on one piece of hardware it makes it s easy to set up multiple systems quickly and also allows a way for us to set up test systems that we can use for our labs to test out new software and operating systems Then when we are done we simply wipe out that test system and it was like it was never there Since virtualization is so common within organizations it was just a matter of time before it was implemented on a smaller scale so we could use it on our desktops Now we have software like Oracle s VirtualBox that allow us to create multiple virtual machines within one physical machine your desktop computer and even let them communicate with each other via their virtual networks The goal of this book is to get you up and running with VirtualBox and cover all the things you need to know to get you started on creating virtual machines and a virtualized environment without confusing you at the same time It sticks with the basics yet covers a wide variety of topics to help you achieve some great looking results without needing to be a movie editing expert The chapters in the book cover the following topics Chapter 1 What is Virtualization and VirtualBox Chapter 2 Installing VirtualBox Chapter 3 The VirtualBox Manager Chapter 4 Creating a Virtual Machine VM Chapter 5 Virtual Machine Settings Chapter 6 Networking Chapter 7 Preferences and Additional Features About the Author James Bernstein has been working with various companies in the IT field since 2000 managing technologies such as SAN and NAS storage VMware backups Windows Servers Active Directory DNS DHCP Networking Microsoft Office Exchange and more He has obtained certifications from Microsoft VMware CompTIA ShoreTel and SNIA and continues to strive to learn new technologies to

further his knowledge on a variety of subjects He is also the founder of the website OnlineComputerTips com which offers its readers valuable information on topics such as Windows networking hardware software and troubleshooting Jim writes much of the content himself and adds new content on a regular basis The site was started in 2005 and is still going strong today
