Dabir S. Viswanath, Tushar K. Ghosh, Dasika H.L. Prasad, Nidamarty V.K. Dutt, Kalipatnapu Y. Rani, 2007-03-31 The need for properties is ever increasing to make processes more economical A good survey of the viscosity data its critical evaluation and correlation would help design engineers scientists and technologists in their areas of interest This type of work assumes more importance as the amount of experimental work in collection and correlation of properties such as viscosity thermal conductivity heat capacities etc has reduced drastically both at the industry universities and national laboratories One of the co authors Professor Viswanath co authored a book jointly with Dr Natarajan *Data Book on the Viscosity of Liquids* in 1989 which mainly presented collected and evaluated liquid viscosity data from the literature Although it is one of its kinds in the field Prof Viswanath recognized that the design engineers scientists and technologists should have a better understanding of theories experimental procedures and operational aspects of viscometers Also rarely the data are readily available at the conditions that are necessary for design of the equipment or for other calculations Therefore the data must be interpolated or extrapolated using the existing literature data and using appropriate correlations or models We have tried to address these issues in this book *The Relationship Between Engine Oil Viscosity and Engine Performance, Part III*, 1978 **Additives**

for Coatings Johan Bieleman, 2008-09-26 No doubt A perfect coating has to look brilliant But other properties of coatings are also most important Coatings have to be durable tough and easily applicable Additives are the key to success in achieving these characteristics even though the amounts used in coating formulations are small It is not trivial at all to select the best additives In practice many series of tests are often necessary and the results do not explain why a certain additive improves the quality of a coating and another one impairs the coating This book is dedicated to developers and applicants of coatings

working in research or production and it is aimed at providing a manual for their daily work It will answer the following questions How do the most important groups of additives act Which effects can be achieved by their addition Scientific theories are linked to practical applications Emphasis is put on the optical aspects that are most important for the applications in practice This book is a milestone in quality assurance in the complete field of coatings **Plastics**

Sustainability Handbook Oliver Türk, 2025-11-17 This book gives a holistic picture on the application and resulting issues of plastics that last a long time but at the same time remain a long time in the environment It is intended to combine chemical fundamentals with value chain and regulatory aspects as well as risks The text aims to provide inspiration for future material developments and concepts for material usage in the future that is more sustainable **Challenges in Protein**

Product Development Nicholas W. Warne, Hanns-Christian Mahler, 2018-06-20 In this volume the authors discuss the many significant challenges currently faced in biotechnology dosage form development providing guidance shared experience and thoughtful reflection on how best to address these potential concerns As the field of therapeutic recombinant therapeutic proteins enters its fourth decade and the market for biopharmaceuticals becomes increasingly competitive companies are increasingly dedicating resources to develop innovative biopharmaceuticals to address unmet medical needs Often the pharmaceutical development scientist is encountering challenging pharmaceutical properties of a given protein or by the demands placed on the product by stability manufacturing and preclinical or clinical expectations as well as the evolving regulatory expectations and landscape Further there have been new findings that require close assessment as for example those related to excipient quality processing viscosity and device compatibility and administration solubility and opalescence and container closure selection The literature varies widely in its discussion of these critical elements and consensus does not exist This topic is receiving a great deal of attention within the biotechnology industry as well as with academic researchers and regulatory agencies globally Therefore this book is of interest for business leaders researchers formulation and process development scientists analytical scientists QA and QC officers regulatory staff manufacturing leaders and regulators active in the pharmaceutical and biotech industry and expert reviewers in regulatory agencies **Paints,**
