Vision and Brain James V. Stone, 2012-09-21 An engaging introduction to the science of vision that offers a coherent account of vision based on general information processing principles In this accessible and engaging introduction to modern vision science James Stone uses visual illusions to explore how the brain sees the world Understanding vision Stone argues is not simply a question of knowing which neurons respond to particular visual features but also requires a computational theory of vision Stone draws together results from David Marr's computational framework Barlow's efficient coding hypothesis Bayesian inference Shannon's information theory and signal processing to construct a coherent account of vision that explains not only how the brain is fooled by particular visual illusions but also why any biological or computer vision system should also be fooled by these illusions This short text includes chapters on the eye and its evolution how and why visual neurons from different species encode the retinal image in the same way how information theory explains color aftereffects how different visual cues provide depth information how the imperfect visual information received by the eye and brain can be rescued by Bayesian inference how different brain regions process visual information and the bizarre perceptual consequences that result from damage to these brain regions The tutorial style emphasizes key conceptual insights rather than mathematical details making the book accessible to the nonscientist and suitable for undergraduate or postgraduate study

Brain-Inspired Intelligence and Visual Perception Wenfeng Wang, Xiangyang Deng, Liang Ding, Limin Zhang, 2019-05-01 This book presents the latest findings in the field of brain inspired intelligence and visual perception BIVP and discusses novel research assumptions including an introduction to brain science and the brain vision hypotheses Moreover it introduces readers to the theory and algorithms of BIVP such as pheromone accumulation and iteration neural cognitive computing mechanisms the integration and scheduling of core modules and brain inspired perception motion and control in a step by step manner Accordingly it will appeal to university researchers R to anyone interested in robots brain cognition or computer vision and to all those wishing to learn about the core theory principles methods algorithms and applications of BIVP

Brain, Vision, Memory Charles G. Gross, 1999-07-26 In these engaging tales describing the growth of knowledge about the brain from the early Egyptians and Greeks to the Dark Ages and the Renaissance to the present time Gross attempts to answer the question of how the discipline of neuroscience evolved into its modern incarnation through the twists and turns of history Charles G Gross is an experimental neuroscientist who specializes in brain mechanisms in vision He is also fascinated by the history of his field In these tales describing the growth of knowledge about the brain from the early Egyptians and Greeks to the present time he attempts to answer the question of how the discipline of neuroscience evolved into its modern incarnation through the twists and turns of history The first essay tells the story of the visual cortex from the first written mention of the

brain by the Egyptians to the philosophical and physiological studies by the Greeks to the Dark Ages and the Renaissance and finally to the modern work of Hubel and Wiesel The second essay focuses on Leonardo da Vinci's beautiful anatomical work on the brain and the eye was Leonardo drawing the body observed the body remembered the body read about or his own dissections The third essay derives from the question of whether there can be a solely theoretical biology or biologist it highlights the work of Emanuel Swedenborg the eighteenth century Swedish mystic who was two hundred years ahead of his time The fourth essay entails a mystery how did the largely ignored brain structure called the hippocampus minor come to be and why was it so important in the controversies that swirled about Darwin's theories The final essay describes the discovery of the visual functions of the temporal and parietal lobes The author traces both developments to nineteenth century observations of the effect of temporal and parietal lesions in monkeys observations that were forgotten and subsequently rediscovered

The Visual Brain in Action David Milner, Mel Goodale, 2006-10-12 First published in 1995 this book presents a model for understanding the visual processing underlying perception and action proposing a broad distinction within the brain between two kinds of vision conscious perception and unconscious online vision

Brain and Visual Perception David H. Hubel M.D., Torsten N. Wiesel M.D., 2004-10-14 This is the story of a hugely successful and enjoyable 25 year collaboration between two scientists who set out to learn how the brain deals with the signals it receives from the two eyes Their work opened up a new area of brain research that led to their receiving the Nobel Prize in 1981 The book contains their major papers from 1959 to 1981 each preceded and followed by comments telling how and why the authors went about the study how the work was received and what has happened since It begins with short autobiographies of both men and describes the state of the field when they started It is intended not only for neurobiologists but for anyone interested in how the brain works biologists psychologists philosophers physicists historians of science and students at all levels from high school to graduate level

Spatial Vision D.J. Ingle, Marc Jeannerod, David Lee, 2012-12-06 This volume contains chapters derived from a N A T O Advanced Study Institute held in June 1983 As the director of this A S I it was my hope that some of the electrophysiologists could express the potentialities of their work for perceptual theory and that some perceptionists could speculate on the underlying units of perception in a way that would engage the imagination of physiologists The reader will have to be the judge of whether this was achieved or whether such a psychophysiological interlingua is still overly idealistic It is clear that after the revolution precipitated by Hubel and Weisel in understanding of visual cortical neurons we still have only a foggy idea of the behavioral output of any particular species of cortical detector It was therefore particularly unfortunate that two persons who have made great strides in correlating interesting facets of cat cortical physiology with human psychophysics Max Cynader and Martin Regan of Dalhousie University were unable to attend this meeting Nevertheless a number of new and challenging ideas regarding both spatial perception and cortical mechanisms are represented in this volume and it is hoped that the reader will remember not only the individual demonstrations but the critical questions posed by the apposition of the two different collections of experimental facts David Ingle April 1984 VII TABLE OF CONTENTS PREFACE V D N Lee and D S Young Visual Timing of Interceptive Action 1 J J The Child Richard A. Mechanisms of Sensory Working Memory Pierre Jolicoeur, Christine Lefebvre, Julio Martinez-Trujillo, 2016-06-17

Mechanisms of Sensory Working Memory Attention and Performance XXV provides an update on research surrounding the memory processes that are crucial for many facets of cognitive processing and experience with new coverage of emerging areas of study including a new understanding of working memory for features of stimuli devoid of verbal phonological or long term memory content such as memory for simple visual features e g texture or color simple auditory features e g pitch or simple tactile features e g vibration frequency now called sensory memory to distinguish from verbal memory This contemporary focus on sensory memory is just beginning and this collection of original contributions provides a foundational reference for the study mechanisms of sensory memory Students scholars and researchers studying memory mechanisms and processes in cognitive neuroscience cognitive science neuroscience and psychology will find this book of great value to their work Introduces the study of sensory mechanisms of working memory as distinct from verbal memory Covers visual memory auditory memory and tactile memory Includes translational content as the breakdown of working memory is often associated with a disease disorder or trauma to the brain Seeing John P. Frisby, 1980 **Research Grants Index** National Institutes of Health (U.S.). Division of Research Grants, 1965 *A Vision of the Brain* Semir Zeki, 2010-01-15 Authored by one of the world s foremost authorities on the biology of the brain Illustrated in two colours throughout Contains a section of full colour graphics A benchmark text for students and researchers alike **Piero's Light** Larry Witham, 2021-11-15 In the tradition of *The Swerve* and Galileo s Daughter *Piero's Light* reveals how art religion and science came together at the dawn of the modern world in the paintings of one remarkable artist An innovative painter in the early generation of Renaissance artists Piero dell Francesca was also an expert on religious topics and a mathematician who wanted to use perspective and geometry to make painting a true science Although only sixteen of Piero s works survive few art historians doubt his importance in the Renaissance A 1992 conference of international experts meeting at the National Gallery of Art deemed Piero One of the most highly regarded painters of the early Renaissance and one of the most respected artists of all time In recent years the quest for Piero has continued among intrepid scholars and *Piero's Light* uncovers the life of this remarkable artistic revolutionary and enduring legacy of the Italian Renaissance **The Muscles of the eye** George Adelmer Rogers, 1922 **Brain**, 1914 **Vision, Brain, and Behavior in Birds** Harris Philip Zeigler, Hans-Joachim Bischof, 1993 This book provides the first comprehensive and current review of considerable progress made over the past decade in analyzing neural and behavioral mechanisms mediating visually guided behavior in birds The visual capacities of birds rival even those of primates and their visual system probably reflects the operation of a ground plan common to all vertebrates This book provides the first comprehensive and current review of considerable progress made over the past decade in analyzing neural and behavioral mechanisms mediating visually guided behavior in birds The book s five major sections deal with the visual world of birds the organization of avian visual systems the development and plasticity of visual structure and

function visuomotor control mechanisms and cognitive processes The introduction to each section discusses the nature and significance of the problem areas providing a context for the chapters to follow which review the current status of research on a specific problem The contributors are an international assemblage of researchers representing a wide variety of disciplines ranging from ornithology to neurophysiology and including ethology experimental psychology anatomy and developmental neurobiology For the ethologist avian behavior is the source of a wide variety of species typical fixed action patterns for the experimental psychologist birds are the subject of choice for studies of conditioning learning and cognitive processes for the neurobiologist they provide model systems for studying developmental processes sensory mechanisms orientation and motor control For these reasons research on the avian brain and behavior occupies an increasingly important place in contemporary behavioral biology
