GPU Parallel Program Development Using CUDA Tolga Soyata,2018-01-19 *GPU Parallel Program Development using CUDA* teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an

overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN

The New Evolution Diet Arthur De Vany,2011-12-20

Believe it or not our DNA is almost exactly the same as that of our ancestors While scientific advances in agriculture medicine and technology have protected man to some degree from dangers such as starvation illness and exposure the fact remains that our cave dwelling cousins were considerably healthier than we are Our paleolithic ancestors did not suffer from heart disease diabetes high blood pressure or obesity In fact a good deal of what we view as normal aging is a modern condition that is more akin to disease than any natural state of growing older Our predecessors were incomparably better nourished than we are and were incredibly physically fit And certainly none of them ever craved a doughnut let alone tasted one In fact the human preference for sweet tastes and fatty textures was developed in an environment where such treats were rare and signaled dense useful energy This once helpful adaptation is the downfall of many a dieter today It s what makes it hard to resist fats and sweets especially when they are all around us We are not living as we were built to live Our genes were forged in an environment where activity was mandatory you were active or you starved or were eaten This created strong selective pressure for genes encoding a smart physically adept individual capable of very high activity levels Humans are among the most active of species and we carry energetically expensive brains to boot Our energy expenditures rank high among all animals At least they once did

The New Evolution Diet by Arthur De Vany PhD is a roadmap back to the better health our ancestors once enjoyed By eliminating modern foods including carbohydrates dairy and all processed foods from our diets we can undo much of the damage caused by our modern food environment The plan is based on three simple principles

- 1 Enjoy the pleasure of food and do not count or restrict calories Eat three satisfying meals a day filled with non starchy vegetables fruits and high quality lean proteins
- 2 Do not starve yourself but do go hungry episodically for brief periods to promote a low fasting blood insulin level and increase metabolic fat burning
- 3 Exercise less not more but with more playfulness and intensity

The goal is to create a strong body with a high resting metabolism and a large physiologic capacity to move through life easily not to burn calories
