The JOSHUA system routines JS routines can be used to manage a JOSHUA data base and execute JOSHUA modules on VAX
VMS and IBM MVS computer systems This manual provides instructions for using the JS routines and information about the
internal data structures and logic used by the routines It is intended for use primarily by JOSHUA systems programmers
however advanced applications programmers may also find it useful The JS routines are as far as possible written in ANSI
FORTRAN 77 so that they are easily maintainable and easily portable to different computer systems Nevertheless the
JOSHUA system provides features that are not available in ANSI FORTRAN 77 notably dynamic module execution and a data
base of named variable length unformatted records so some parts of the routines are coded in nonstandard FORTRAN or
assembler as a last resort In most cases the nonstandard sections of code are different for each computer system To make it
easy for programmers using the JS routines to avoid naming conflicts the JS routines and common block all have six
character names that begin with the characters open_quotes JS close_quotes Before using this manual one should be familiar
with the JOSHUA system as described in open_quotes The JOSHUA Users Manual close_quotes ANSI FORTRAN 77 and at
least one of the computer systems for which the JS routines have been implemented **ZAXXON Owner's Manual**
