K. Otto, 2012-10-23 Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology. *Neurolaw* Sjors Ligthart, Dave van Toor, Tijs Kooijmans, Thomas Douglas, Gerben Meynen, 2021-05-05 This edited book provides an in-depth examination of the implications of neuroscience for the criminal justice system. It draws together experts from across law, neuroscience, medicine, psychology, criminology, and ethics and offers an important contribution to current debates at the intersection of these fields. It examines how neuroscience might contribute to fair and more effective criminal justice systems and how neuroscientific insights and information can be integrated into criminal law in a way that respects fundamental rights and moral values. The book's first part approaches these questions from a legal perspective, followed by ethical accounts in part two. Its authors address a wide range of topics and approaches, some more theoretical like those regarding the foundations of punishment, others are more practical like those concerning the use of brain scans in the courtroom. Together they illustrate the thoroughly interdisciplinary nature of the debate in which science, law, and ethics are closely intertwined. It will appeal in particular to students and scholars of law, neuroscience, criminology, socio-legal studies, and philosophy.
