worlds has been growing for at least a dozen years only today it is possible to bring together an international team of highly accomplished authors to examine them with both care and excitement employing a range of theories and methodologies to discover the principles that are making virtual worlds increasingly popular and may in future establish them as a major sector of human centered computing

Making Virtual Worlds Thomas Malaby, 2011-01-15 The past decade has seen phenomenal growth in the development and use of virtual worlds In one of the most notable Second Life millions of people have created online avatars in order to play games take classes socialize and conduct business transactions Second Life offers a gathering point and the tools for people to create a new world online Too often neglected in popular and scholarly accounts of such groundbreaking new environments is the simple truth that of necessity such virtual worlds emerge from physical workplaces marked by negotiation creation and constant change Thomas Malaby spent a year at Linden Lab the real world home of Second Life observing those who develop and profit from the sprawling self generating system they have created Some of the challenges created by Second Life for its developers were of a very traditional nature such as how to cope with a business that is growing more quickly than existing staff can handle Others are seemingly new How for instance does one regulate something that is supposed to run on its own Is it possible simply to create a space for people to use and then not govern its use Can one apply these same free range free market principles to the office environment in which the game is produced Lindens as the Linden Lab employees call themselves found that their efforts to prompt user behavior of one sort or another were fraught with complexities as a number of ongoing processes collided with their own interventions Malaby thoughtfully describes the world of Linden Lab and the challenges faced while he was conducting his in depth ethnographic research there He shows how the workers of a very young but quickly growing company were themselves caught up in ideas about technology games and organizations and struggled to manage not only their virtual world but also themselves in a nonhierarchical fashion In exploring the practices the Lindens employed he questions what was at stake in their virtual world what a game really is and how people participate and the role of the unexpected in a product like Second Life and an organization like Linden Lab

Virtual Worlds Liz Falconer, Mari Carmen Gil Ortega, 2018 This book explores the rich and fascinating topic of virtual worlds by bringing together research findings and discussion pieces from an international group of leading practitioners in the field There are many different definitions of virtual worlds but they all share the characteristic of enabling real time interaction between users who are present in these worlds in the form of avatars i e digital projections of ourselves into virtual environments A particular theme of the book is how our activities in virtual worlds continue to develop our understanding of the nature of virtual experience and particularly what it means to be digitally human These ideas are explored from a diverse and engaging range of perspectives that include archaeology languages teacher training computing meditation and well being forensic science performance art and artificial intelligence Each chapter provides an in depth discussion and analysis and practical examples of successful implementations of virtual

world technologies are also included The book will be invaluable to researchers and practitioners in the fields of virtual worlds virtual reality augmented reality and artificial intelligence It presents evidence discussion and advice on some of the underpinning concepts relating to virtuality on the application of virtual technologies to our daily lives and encourages us to ponder the possible futures of these types of technology

Coming of Age in Second Life Tom Boellstorff, 2015-08-25

Millions of people around the world today spend portions of their lives in online virtual worlds Second Life is one of the largest of these virtual worlds The residents of Second Life create communities buy property and build homes go to concerts meet in bars attend weddings and religious services buy and sell virtual goods and services find friendship fall in love the possibilities are endless and all encountered through a computer screen At the time of its initial publication in 2008 Coming of Age in Second Life was the first book of anthropology to examine this thriving alternate universe Tom Boellstorff conducted more than two years of fieldwork in Second Life living among and observing its residents in exactly the same way anthropologists traditionally have done to learn about cultures and social groups in the so called real world He conducted his research as the avatar Tom Bukowski and applied the rigorous methods of anthropology to study many facets of this new frontier of human life including issues of gender race sex money conflict and antisocial behavior the construction of place and time and the interplay of self and group Coming of Age in Second Life shows how virtual worlds can change ideas about identity and society Bringing anthropology into territory never before studied this book demonstrates that in some ways humans have always been virtual and that virtual worlds in all their rich complexity build upon a human capacity for culture that is as old as humanity itself Now with a new preface in which the author places his book in light of the most recent transformations in online culture Coming of Age in Second Life remains the classic ethnography of virtual worlds

Virtual Worlds Liz Falconer, Mari Carmen Gil Ortega, 2018

The Social Life of Avatars Ralph Schroeder, 2002-01-10

Virtual reality technology has been developed commercially since the early 1990s but it is only recently with the popularity of the internet that it has become feasible to link many users simultaneously in shared virtual environments This raises a number of interesting questions such as what is the difference between face to face and avatar to avatar interaction What patterns govern the formation of virtual communities How does the appearance of the avatar change the nature of the communication There has been much speculation about issues such as these but research is still at a relatively early stage This is the first book to bring together work from relevant disciplines to form a reference guide for practitioners students and researchers interested in how we interact in computer generated environments It contains contributions from most of the key people in this area including Microsoft Research's Virtual Worlds Group and presents their findings in a way which is accessible to readers who are new to this field or who come from related areas It is divided into 2 parts chapters 2-6 deal with internet based virtual worlds which have been widely used by the public chapters 7-10 deal with networked VR systems which have been primarily used in pilot studies and research Some chapters take the viewpoint of a participant observer whilst others

take a more experimental approach and assess the results of relevant trials This book will be essential reading for anyone involved in developing using or researching virtual worlds and will also be of interest to students on courses such as VR and Computer mediated communication The Social Life of Avatars Ralph Schroeder,2012-12-06 Virtual reality VR technology has been developed commercially since the early 1990s 1 Yet it is only with the growth of the Internet and other high bandwidth links that VR systems have increasingly become networked to allow users to share the same virtual environment VE Shared YEs raise a number of interesting questions what is the difference between face to face interaction and interaction between persons inside YEs How does the appearance of the avatar as the graphical representation of the user has become known change the nature of interaction And what governs the formation of virtual communities This volume brings together contributions from social scientists and computer scientists who have conducted research on social interaction in various types of YEs Two previous volumes in this CSCW book series 2 3 have examined related aspects of research on YEs social navigation and collaboration although they do not always deal with VRIVEs in the sense that it is used here see the definition in Chapter 1 The aim of this volume is to explore how people interact with each other in computer generated virtual worlds
