Vision In Alzheimers Disease Interdisciplinary Topics In Gerontology And Geriatrics Vol 34:

Vision in Alzheimer's Disease A. Cronin-Golomb, P. R. Hof, Tamàs Fülöp, 2004-07 Visual dysfunction is prevalent in Alzheimer's disease and in related disorders such as posterior cortical atrophy and Down syndrome. The neuropathology of these disorders affects brain areas that process low level vision as well as higher order cognition and attention. This volume spans the range of topics on vision from structure retinal and cortical to function cortical activation to behavior perception cognition attention hallucinations and everyday activities. The chapters together indicate that lower level visual deficits can contribute to or masquerade as higher order cognitive impairments. As important they suggest that vision based interventions may improve patients lives. An emerging theme is that the study of variations in visual system pathology behavior and genetic risk will likely provide insights into typical Alzheimer's disease as well as related conditions. The visual disorders of Alzheimer's original case and its cousins of the 21st century have much to teach us about the changing visual system in aging and age related neurodegenerative disease. This book is essential reading for neurologists neuropsychologists ophthalmologists and optometrists geriatricians and gerontologists psychiatrists occupational therapists and other health professionals who provide diagnosis and clinical care to individuals with Alzheimer's disease and related disorders. [The Clinical Spectrum of Alzheimer's Disease](#) Suzanne De La Monte, 2011-09-06 The Clinical Spectrum of Alzheimer's Disease: The Charge Toward Comprehensive Diagnostic and Therapeutic Strategies is highly informative and current. Acknowledged experts in the field critically review both standard and under appreciated clinical behavioral epidemiological genetic and neuroimaging attributes of Alzheimer's disease. The collection covers diverse topics of interest to clinicians and researchers alike. Experienced professionals and newcomers to the field will benefit from the read. The strengths and weaknesses of current clinical non invasive neuro imaging and biomarker diagnostic approaches are explained. The perspectives give fresh insights into the process of neurodegeneration. Readers will be enlightened by the evidence that the neural circuits damaged by neurodegeneration are much broader than conventionally taught suggesting that Alzheimer's could be detected at earlier stages of disease by utilizing multi pronged diagnostic approaches. This book inspires renewed hope that more effective treatments could be developed based upon the expanding list of potential therapeutic targets. **Occupational Therapy with Aging Adults** Karen Frank Barney, Margaret Perkinson, 2015-12-11 Look no further for the book that provides the information essential for successful practice in the rapidly growing field of gerontological occupational therapy.
