Kyohei Fujimoto, Hisashi Morishita

Zeland Ie3d User Manual:

Noise Coupling in System-on-Chip Thomas Noulis, 2018-01-09 Noise Coupling is the root cause of the majority of Systems on Chip SoC product fails The book discusses a breakthrough substrate coupling analysis flow and modelling toolset addressing the needs of the design community The flow provides capability to analyze noise components propagating through the substrate the parasitic interconnects and the package Using this book the reader can analyze and avoid complex noise coupling that degrades RF and mixed signal design performance while reducing the need for conservative design practices With chapters written by leading international experts in the field novel methodologies are provided to identify noise coupling in silicon It additionally features case studies that can be found in any modern CMOS SoC product for mobile communications automotive applications and readout front ends

Modern Small Antennas Kyohei Fujimoto, Hisashi Morishita, 2014-01-09 If you are involved in designing and developing small antennas this complete cutting edge guide covers everything you need to know From fundamentals and basic theory to design optimization evaluation measurements and simulation techniques all the essential information is included You will also get many practical examples from a range of wireless systems whilst a glossary is provided to bring you up to speed on the latest terminology A wide variety of small antennas is covered and design and practice steps are described for each type electrically small functionally small physically constrained small and physically small Whether you are a professional in industry a researcher or a graduate student this is your essential guide to small antennas

VLSI: Systems on a Chip Luis Miguel Silveira, Srinivas Devadas, Ricardo A. Reis, 2013-11-11 For over three decades now silicon capacity has steadily been doubling every year and a half with equally staggering improvements continuously being observed in operating speeds This increase in capacity has allowed for more complex systems to be built on a single silicon chip Coupled with this functionality increase speed improvements have fueled tremendous advancements in computing and have enabled new multi media applications Such trends aimed at integrating higher levels of circuit functionality are tightly related to an emphasis on compactness in consumer electronic products and a widespread growth and interest in wireless communications and products These trends are expected to persist for some time as technology and design methodologies continue to evolve and the era of Systems on a Chip has definitely come of age While technology improvements and spiraling silicon capacity allow designers to pack more functions onto a single piece of silicon they also highlight a pressing challenge for system designers to keep up with such amazing complexity To handle higher operating speeds and the constraints of portability and connectivity new circuit techniques have appeared Intensive research and progress in EDA tools design methodologies and techniques is required to empower designers with the ability to make efficient use of the potential offered by this increasing silicon capacity and complexity and to enable them to design test verify and build such systems
