Topical Drug Bioavailability, Bioequivalence, and Penetration Vinod P. Shah, Howard I. Maibach, John Jenner, 2015-01-30 This authoritative volume explores advances in the techniques used to measure percutaneous penetration of drugs and chemicals to assess bioavailability and bioequivalence and discusses how they have been used in clinical and scientific investigations Seven comprehensive sections examine topics including in vitro drug release topical drugs products clinical studies and guidelines and workshop reports among others The book also describes how targeted transdermal drug delivery and more sophisticated mathematical modelling can aid in understanding the bioavailability of transdermal drugs The first edition of this book was an important reference guide for researchers working to define the effectiveness and safety of drugs and chemicals that penetrated the skin This second edition contains cutting edge advances in the field and is a key resource to those seeking to define the bioavailability and bioequivalence of percutaneously active compounds to improve scientific and clinical investigation and regulation

Skin Decontamination Hanjiang Zhu, Howard I. Maibach, 2019-09-26 The skin is the first line of defense against chemical warfare agents including nerve agents and toxic industrial chemicals providing a possible barrier or delay to systemic distribution However some chemicals act directly on the skin including vesicants sulfur mustard and corrosive compounds such as strong acids or bases and do not have to gain access to systemic circulation to cause extensive skin damage Early and rapid skin decontamination is extremely important following exposure to chemical warfare agents and toxic industrial chemicals because it decreases serious skin damage to the patient and potentially their doctor This multi authored international text pulls together a century of decontamination research and helps the reader expedite solutions that will decrease morbidity and mortality Complete with dozens of high quality photographs and illustrations Skin Decontamination aids industrial hygiene dermatology occupational physicians and those involved in the public health arena

Translating Molecules into Medicines Shobha N. Bhattachar, John S. Morrison, Daniel R. Mudra, David M. Bender, 2017-04-21 Tackling translational medicine with a focus on the drug discovery development interface this book integrates approaches and tactics from multiple disciplines rather than just the pharmaceutical aspect of the field The authors of each chapter address the paradox between the molecular understanding of diseases drug discovery and drug development Laying out the detailed trends from various fields different chapters are dedicated to target engagement toxicological safety assessments and the compelling relationship of optimizing early clinical studies with design strategies The book also highlights the importance of balancing the three pillars sufficient efficacy acceptable safety and appropriate pharmacokinetics all of which are crucial to successful efforts in discovery and development With discussions regarding the combined approaches of molecular research personalized medicine pre clinical and clinical development as well as targeted therapies this compendium is a flexible fit perfect for professionals in the pharmaceutical industry and related academic fields

Electricity and Magnetism in Biology and Medicine Ferdinando Bersani,2012-12-06 In the

last few decades the research on bioelectromagnetics has expanded worldwide. About one thousand researchers are now working in the field in a variety of institutions throughout the world including medical, biological, engineering and technical laboratories and protection agencies. After many years of research a clear picture is now emerging. Initially the research was mainly interested in the therapeutic applications of ELF electric and magnetic fields and the RF range was mainly taken into consideration with respect to thermal effects only. Then the growing body of biological effects of ELF fields on cells and biological tissues, particularly for the repair processes in bone, have drawn the attention of researchers to non thermal effects ranging from static fields to microwaves. A specific field of interest that has been the object of a large debate in the last twenty years has been the potential health risk associated with electric power production and distribution and more recently with domestic and industrial appliances. In the last few years the explosion of the market for cellularphones has highlighted the issue of possible health dangers related to their use and to the widespread presence of base stations. The first World Congress on Electricity and Magnetism in Biology and Medicine was held in Orlando, Florida in 1992 and collected the widest amount of contributions from almost all the major researchers involved in the field.
