The only downside is that virtualization can be extremely daunting to learn and even harder to set up with strong security controls. There is a plethora of knowledge on how to build home labs but it can be difficult to find. The premise of this book is to provide students a hands on go to resource for building a secure customizable lab environment. Readers will choose one of five hypervisors for building their baseline lab environment and will be guided through performing all of the necessary setup tasks. This allows students to become more familiar with virtualization technologies, gain mastery over their chosen hypervisor and design a safe and secure virtual lab environment for further endeavors.
