Ships for the Seven Seas Thomas Heinrich, 2020-03-24 Thomas R Heinrich explores American shipbuilding from the workshop level to subcontracting networks spanning the Delaware Valley Winner of the North American Society for Oceanic History's John Lyman Book Award Originally published in 1996 Sustained by a skilled work force and the Pennsylvania iron and steel industry Philadelphia shipbuilders negotiated the transition from wooden to iron hull construction earlier and far more easily than most other builders Between the Civil War and World War I Philadelphia emerged as the vital center of American shipbuilding constructing a wide variety of vessel types such as passenger liners freighters battleships and cruisers In *Ships for the Seven Seas* Thomas R Heinrich explores this complex industry from the workshop level to subcontracting networks spanning the Delaware Valley He describes entrepreneurial strategies and industrial change that facilitated the rise of major shipbuilding firms how naval architecture marine engineering and craft skills evolved as iron and steel overtook wood as the basic construction material and how changes in domestic and international trade and the rise of the American steel navy helped generate vessel contracts for local builders Heinrich also examines the formation of the military industrial complex in the context of naval contracting Contributing to current debates in business history *Ships for the Seven Seas* explains how proprietary ownership and batch production strategies enabled late nineteenth century builders to supply volatile markets with custom built steamships But large scale naval construction in the 1920s eroded production flexibility Heinrich argues and since then ill conceived merchant marine policies and naval

contracting procedures have brought about a structural crisis in American shipbuilding and the demise of the venerable Philadelphia shipyards

The American Reaper Gordon M. Winder, 2016-04-01 The American Reaper adopts a network approach to account for the international diffusion of harvesting technology from North America from the invention of the reaper through to the formation of a dominant transnational corporation International Harvester Much previous historical research into industrial networks focuses on industrial districts within metropolitan centres but by focusing on harvesting a typically rural technology this book is able to analyse the spread of technological knowledge through a series of local networks and across national boundaries In doing so it argues that the industry developed through a relatively stable stage from the 1850s into the 1890s during which time many firms shared knowledge within and outside the US through patent licensing to spread the diffusion of the American style of machines to establishments located around the industrial world This positive cooperation was further enhanced through sales networks that appear to be early expressions of managerial firms The book also reinterprets the rise of giant corporations especially International Harvester Corporation IHC arguing that mass production was achieved in Chicago in the 1880s where unprecedented urban growth made possible a break with the constraints felt elsewhere in the dispersed production system It unleashed an unchecked competitive market economy with destructive tendencies throughout the transnational American reaper networks a previously stable and expanding production system This is significant because the rise of corporate capital in this industry is usually explained as an outworking of national natural advantage as an ingenious harnessing of science and technology to solve production problems and as a rational solution to the problems associated with the worst forms of unregulated competition that emerged as independent firms developed from small scale artisanal production to large scale manufacturers on their own and within the separate and isolated US economy The first study dedicated to the development and diffusion of American harvesting machine technology this book will appeal to scholars from a diverse range of fields including economic history business history the history of knowledge transfer historical geography and economic geography
