Work Health And Environment Old Problems New Solutions:

Work, Health, and Environment Charles Levenstein, John Wooding, 1997-07-19 This is an indispensable collection on the crisis of worker health and safety in the United States This collection offers an all important lesson for the labor movement that problems of occupational health and safety are not merely technical problems but rather problems relating to workers lack of control over the organization of capitalist production *Health Services Reports*, 2005 **Monthly Labor Review** United States. Bureau of Labor Statistics, 2006 Publishes in depth articles on labor subjects current labor statistics information about current labor contracts and book reviews Globalization, Universities and Issues of Sustainable Human Development Jean Larson Pyle, Robert Forrant, 2002-01-01 This volume raises an important question Given the fast changing global economy and the challenges it presents what is the role for the university as an institution promoting sustainable human development The editors begin by outlining the changes associated with the recent wave of globalization particularly transformations in the relative power of institutions internationally They analyze the constraints universities face in industrialized and developing countries in promoting sustainable human development **The Science of Bureaucracy** David Demortain, 2020-01-21 How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy **At the Point of Production** Charles Levenstein, 2017-07-28 At the Point of Production a compilation of contributions to New Solutions Journal of Occupational and Environmental Health Policy locates workers health and safety problems in the broad political economy It argues that without a deep understanding of the social political economic context of particular industries or workplaces we cannot fully grasp the process of recognition and control of industrial hazards The contributors report on a

series of case studies all of which used the point of production framework to investigate particular problems or industries The focus of the first section is on globalization the impact of privatization on the health and safety of workers and communities in Brazil and Mexico The next section addresses environmental issues the unintended effects of environmental regulation on workers the situation of hazardous waste workers and emergency responders the implementation of toxics use reduction and the role of workers in pollution prevention In the third section the contributors explore the intersection of labor relations with gender relations at the point of production A final chapter deals with some of the practical issues involved in conducting occupational health research in the contested terrain of the workplace

Economy-Environment-Development-Knowledge Ken Cole, 2002-01-04 As we approach the end of the second millennium we find ourselves in times of radical social change Orthodox explanations of the economy the environment and the development process are unable to provide coherent policies for such issues as employment creation environmental degradation and social progress Economy Environment Development Knowledge provides alternative perspectives on these fundamental aspects of human existence Economists environmentalists and development theorists have so far been unable to agree on the most successful prescriptions to address problems To understand contrast and compare alternative understandings of economic environmental and development issues we need to be aware why theorists conceptualise the process of social experience so differently Part 1 of Economy Environment Development Knowledge addresses the subjective preference cost of production and abstract labour theories of values in economics Part 2 explains egocentrism ecocentrism and socioecocentrism as competing theoretical perspectives in environmental theory Part 3 highlights modernisation theory structuralist theory and class struggle as ways to account for the process of development and Part 4 examines the generation of knowledge through positivism paradigms and praxis legitimating competing perspectives in economics environmentalist and development The book concludes by considering why different people find alternative explanations more or less plausible By addressing the disagreements between theorists Economy Environment Development Knowledge provides a unique basis to contrast and compare the plethora of theories of and policies for economic prosperity environmental sustainability and social progress

Materials Matter Ken Geiser, 2001-05-25 The products we purchase and use are assembled from a wide range of naturally occurring and manufactured materials But too often we create hazards for the ecosystem and human health as we mine process distribute use and dispose of these materials Until recently most research has focused on the waste end of material cycles This book argues that the safest and least costly point at which to avoid environmental damage is when materials are first designed and selected for use in industrial production Materials Matter presents convincing evidence that we can use fewer materials and eliminate the use of many toxic chemicals by focusing directly on material chemical use when products are designed It also shows how manufacturers can save money by increasing the effectiveness of material use and reducing the use of toxic chemicals It advocates new directions for the material sciences and government

policies on materials And it argues that manufacturers suppliers and customers need to set more socially responsible policies for products and services to achieve higher environmental and health goals *The Routledge Handbook of Health Communication* Teresa L. Issues in Green Criminology Piers Beirne,Nigel South,2013-09-05 Issues in Green Criminology confronting

harm against environments, humanity and other animals aims to provide if not a manifesto then at least a significant resource for thinking about green criminology, a rapidly developing field. It offers a set of specially written introductions and a variety of current and new directions wide ranging in scope and international in terms of coverage and contributors. It provides focused discussions of current and cutting edge issues that will influence the emergence of a coherent perspective on green issues. The contributors are drawn from the leading thinkers in the field. The twelve chapters of the book explore the myriad ways in which governments, transnational corporations, military apparatuses and ordinary people going about their everyday lives routinely harm environments, other animals and humanity. The book will be essential reading not only for students taking courses in colleges and universities but also for activists in the environmental and animal rights movements. Its concern is with an ever expanding agenda, the whys, the hows and the whens of the generation and control of the many aspects of harm to environments, ecological systems and all species of animals including humans. These harms include but are not limited to exploitation, modes of discrimination and disempowerment, degradation, abuse, exclusion, pain, injury, loss and suffering. Straddling and intersecting these many forms of harm are key concepts for a green criminology such as gender inequalities, racism, dominionism and speciesism, classism, the north-south divide, the accountability of science and the ethics of global capitalist expansion. Green criminology has the potential to provide not only a different way of examining and making sense of various forms of crime and control responses, some well known, others less so, but can also make explicable much wider connections that are not generally well understood. As all societies face up to the need to confront harms against environments, other animals and humanity, criminology will have a major role to play. This book will be an essential part of this process.

Narrating the City Wladimir Fischer-Nebmaier, Matthew P. Berg, Anastasia Christou, 2015-09-01. In recent decades the insight that narration shapes our perception of reality has inspired and influenced the most innovative historical accounts. Focusing on new research, this volume explores the history of non elite populations in cities from Caracas to Vienna and Paris to Belgrade. Narration is central to the theme of each contribution, whether as a means of description, a methodological approach or basic story telling. This book brings together research that both asks classical socio historical questions and takes narration seriously, engaging with novels, films, local history accounts, petitions to municipal authorities and interviews with alternative cinema activists.

Environmental Health Perspectives, 1997-04 Natural Causes James R. O'Connor, 1998-01-01. It examines the power of ecological Marxist analysis for grounding economic behaviour in the real world and for formulating political strategies.

Urban Recycling and the Search for Sustainable

Community Development Adam S. Weinberg,David N. Pellow,Allan Schnaiberg,2000-07-24 More Americans recycle than vote And most do so to improve their communities and the environment But do recycling programs advance social economic and environmental goals To answer this three sociologists with expertise in urban and environmental planning have conducted the first major study of urban recycling They compare four types of programs in the Chicago metropolitan area a community based drop off center a municipal curbside program a recycling industrial park and a linkage program Their conclusion admirably elaborated is that recycling can realize sustainable community development but that current programs

achieve few benefits for the communities in which they are located The authors discover that the history of recycling mirrors many other urban reforms What began in the 1960s as a sustainable community enterprise has become a commodity based profit driven industry Large private firms using public dollars have chased out smaller nonprofit and family owned efforts Perhaps most troubling is that this process was not born of economic necessity Rather as the authors show socially oriented programs are actually more viable than profit focused systems This finding raises unsettling questions about the prospects for any sort of sustainable local development in the globalizing economy Based on a decade of research this is the first book to fully explore the range of impacts that recycling generates in our communities It presents recycling as a tantalizing case study of the promises and pitfalls of community development It also serves as a rich account of how the state and private interests linked to the global economy alter the terrain of local neighborhoods

Silent Victories John W. Ward, Christian Warren, 2007 Americans health improved dramatically over the twentieth century Public health programs for disease and injury prevention were responsible for much of this advance Over the century America s public health system grew dramatically employing science and political authority in response to an increasing array of health problems As the disease burden of the old scourges of infection perinatal mortality and dietary deficiencies began to lift public health s mandate expanded to take on new health threats such as those resulting from a changing workplace the rise of the automobile and chronic and complex conditions caused by smoking diet and other lifestyle and environmental factors Public health measures almost always occur on contested ground accordingly controversies and recriminations over past failures often persist In contrast public health s many successes even the imperfect ones become part of the fabric of everyday life a fact already apparent early in the last century when C E A Winslow reminded his peers that the lives saved and healthy years extended were the silent victories of public health In its exploration of ten major public health issues addressed in the 20th century Silent Victories takes a unique approach for each issue leading scientists in the field trace the discoveries practices and programs that reduced morbidity and mortality from disease and injury and an accompanying chapter by a historian or social scientist highlights key moments or conflicts that shaped public health action on that issue The book concludes with a look toward the challenges public health must face in the future Silent Victories reveals the lessons of history in a format designed to appeal to students health professionals and the public seeking to understand how public health advanced the country s health in the 20th century and the challenges to protecting health in the future
