exhaustive nor a field guide in the traditional sense. Instead, it offers theoretical reflections from the field based on extensive archival research. This book sets out to examine the arrays of power, resources, technologies, networking, and knowledge that cluster around the term development and the manner in which architects and planners negotiated these thickets in their multiple capacities as knowledge experts, as technicians, as negotiators, and as occasional authorities on settlements, space, domesticity, education, health, and every other field where arguments for development were made.
