Human Digital Twins for Medical and Product Engineering Jörg Miehl, Anne D. Koelewijn, Julie Choisne, 2024-10-25
The current trend towards digitalization of human centred engineering processes in conjunction with advances in biomechanistic modelling high performance computing artificial intelligence AI and sensor technology leads to unprecedented transformation potentials in medical product and human factors engineering for the enhancement of human technology interaction as well as medical treatment outcomes Biomechanical simulations hold high potential by revealing the processes and inner strain conditions of the human body For reliable simulation results a model suitable for the application and a way to measure estimate predict the human motion behaviour and the interaction with the environment and or interacting technology are necessary In this context we refer to a human digital twin as an extension and connection of participant person specific biomechanical human models with data streams from clinical observation operational use of technology or daily life Each human digital twin is an instance digitally representing a specific person in healthy or pathological state suitable for the specified application

Applications of Finite Element Modeling for Mechanical and Mechatronic Systems Marek Krawczuk, Magdalena Palacz, 2021-09-02 Modern engineering practice requires advanced numerical modeling because among other things it reduces the costs associated with prototyping or predicting the occurrence of potentially dangerous situations during operation in certain defined conditions Thus far different methods have been used to implement the real structure into the numerical version The most popular uses have been variations of the finite element method FEM The aim of this Special Issue has been to familiarize the reader with the latest applications of the FEM for the modeling and analysis of diverse mechanical problems Authors are encouraged to provide a concise description of the specific application or a potential application of the Special Issue

processes Structural Failure and Plasticity X.L. Zhao,R.H. Grzebieta,2000-10-04 As mankind continues to push back the boundaries and begins to explore other worlds and the ocean depths a thorough understanding of how structures behave when subjected to extremes in temperature pressure and high loading rates will be essential This symposium provided the perfect forum for presenting research into structures subjected to such extreme loads There were a large number of papers presented under topics of impact blast and shock loading indicating a strong research interest in high rates of loading Similarly new topics have been added to the traditional symposium list such as fire loading earthquake loading and fatigue and connection failures It is clear now that fundamental knowledge of plastic deformation of structures to various extreme loads is coming of age Each full paper was peer reviewed by at least two experts in the field *Batteries* Ronald K Jurgen,2010-11-29 With production and planning for new electric vehicles gaining momentum worldwide this book the second in a series of five volumes on this subject provides engineers and researchers with perspectives on the most current and innovative developments regarding electric and hybrid electric vehicle technology design considerations and components This book features 15 SAE technical papers published from 2008 through 2010 that provide an overview of research on electric vehicle batteries Topics include Charging strategy studies for PHEV batteries Electric vehicle and hybrid electric vehicle rechargeable energy storage systems Strategies for reducing plug in battery costs Cold temperature performance Lithium ion battery power capability testing crash safety and modeling **Moody's International Manual** ,1997
