Business Process Modelling Bernd Scholz-Reiter, Eberhard Stickel, 2012-12-06 Today information is considered to be a

valuable company resource that has to be planned coordinated and documented Business processes need to be treated in the same way Moreover significant potential for improvement may lie in optimizing these processes As a consequence information should be collected and suitably modelled and business processes need to be analyzed and redesigned Business modelling usually deals with different views of a company The data view is concerned with information structures the functional view analyzes tasks and procedures the process view links different functions by analyzing workflows and events triggering them while the organizational view is concerned with the structure of the company under investigation These views should not however be treated in an isolated manner The key to success is to deal with the interaction between them Hence business modelling should provide an integrated view of all relevant informational functional organizational and workflow issues One of the most significant problems results from the complexity of the modelling task Modelling tools are required and are to be used in combination with other close methodologies and applications Suitable generalizations and or new methodologies need to be developed *Tailoring Software Infrastructures* Christian Dörner,2010 Today s non tayloristic work environments call for flexible work practices supported by dynamic IT systems Changing and optimising business processes has become an important adaptation mechanism in this context However process models cannot capture every conceivable real life situation and firms software infrastructures often do not provide the flexibility required for supporting design in use through effective tailoring processes The involvement of business users in the continuous redesign of business processes is a beneficial solution for these problems as it enhances decision processes by making specific information available more quickly However involving business users in these redesign processes requires specific design tools This book presents the development of an environment that enables business users to independently model business processes and workflows The environment reduces the technical skills required for modelling business processes and workflows to enable business users to tailor heterogeneous software infrastructures It also provides improved documentation facilities The facilities add usage related information about Web services to the existing functional metadata which is already included in current Web service standards and workflow modelling tools The environment enables business users to create this usage related information cooperatively which leads to a domain specific documentation of Web services Based on this information it provides an enhanced search system that identifies related services and service functions The evaluation of the environment showed that users had a positive perception of modelling business processes and workflows They considered this to be useful for the visualisation and automation of business processes as well as for the creation of calculations since it could enhance the efficiency and efficacy of their work *Business Process Technology* Dirk Draheim,2010-08-09 Currently we see a variety of tools and techniques for specifying and implementing business processes The problem is that there are still gaps and tensions between the different disciplines needed to improve business process execution and improvement in enterprises Business process modeling workflow execution and application programming are examples of disciplines that are

hosted by different communities and that emerged separately from each other. In particular, concepts have not yet been fully elaborated at the system analysis level. Therefore, practitioners are faced again and again with similar questions in concrete business process projects: Which decomposition mechanism to use? How to find the correct granularity for business process activities? Which implementing technology is the optimal one in a given situation? This work offers an approach to the systematization of the field. The methodology used is explicitly not a comparative analysis of existing tools and techniques, although a review of existing tools is an essential basis for the considerations in the book. Rather, the book tries to provide a landscape of rationales and concepts in business processes with a discussion of alternatives.

Database and Expert Systems Applications

Trevor Bench-Capon, Giovanni Soda, Min A Tjoa, 1999-08-20

The Database and Expert Systems Applications (DEXA) conferences bring together researchers and practitioners from all over the world to exchange ideas, experiences, and opinions in a friendly and stimulating environment. The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems. DEXA covers a broad field, and all aspects of database, knowledge base, and related technologies and their applications are represented. Once again, there were a good number of submissions: 241 papers were submitted, and of these, the programme committee selected 103 to be presented. DEXA 99 took place in Florence and was the tenth conference in the series, following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse, and Vienna. The decade has seen many developments in the areas covered by DEXA, developments in which DEXA has played its part. I would like to express thanks to all the institutions which have actively supported and made possible this conference: namely, University of Florence, Italy; IDG, CNR, Italy; FAW, University of Linz, Austria; Austrian Computer Society; DEXA Association. In addition, we must thank all the people who have contributed their time and effort to make the conference possible. Special thanks go to Maria Schweikert, Technical University of Vienna; M Neubauer and G Wagner, FAW, University of Linz. We must also thank all the members of the programme committee whose careful reviews are important to the quality of the conference.
