Therapeutic Activities For Children And Teens Coping With Health Issues:

Therapeutic Activities for Children and Teens Coping with Health Issues Robyn Hart, Judy Rollins, 2011-05-03
Winner of the American Journal of Nursing Book of the Year 2011 Category Maternal And Child Health Building on children's natural inclinations to pretend and reenact play therapy is widely used in the treatment of psychological problems in childhood. This book is the only one of its kind with more than 200 therapeutic activities specifically designed for working with children and teenagers within the healthcare system. It provides evidence-based age-appropriate activities for interventions that promote coping. The activities target topics such as separation anxiety, self-esteem issues, body image, death, isolation, and pain. Mental health practitioners will appreciate its cookbook format with quickly read and implemented activities.

Integrating Therapeutic Play Into Nursing and Allied Health Practice Judi A. Parson, Belinda J. Dean, Natalie A. Hadiprodjo, 2023-01-01
This book helps support developmentally sensitive nursing and allied health practice by integrating the therapeutic powers of play into child and adolescent health care service provision. It is designed to link play, child development, neuroscience, biopsychosocial, and attachment theories with the biomedical model of health. Nurses and allied health professionals work with children aged between 0-18 years and with diverse childhood illnesses, injuries, diseases, disorders, and conditions and are therefore in a prime position to understand and support children through potentially painful and traumatic health care experiences. Understanding of the role of play and the application of the therapeutic powers of play in communicating with children and families has the potential to significantly optimise paediatric care. The theory and play-based strategies, tools, and techniques presented in this book assist nurses and health care professionals to engage with children in an age-appropriate manner and speak with children through their natural language of play to enhance comprehension, coping, resiliency, and healing. Play is recognised as a sequentially developing ability and can be aligned with the child's age and stage of life. Play-based approaches can be placed on a continuum from fully child-led or non-directive play to adult-facilitated, educative play. Medical information can be tailored according to the various points along this continuum to inform clinical reasoning and to help children prepare for procedures, recover from medical interventions, and/or make sense of their diagnosis. Whilst this book is directed at nurses and allied health professionals who work with children and their families, it may also be a valuable resource for medical and other professionals in community or educational settings to work systemically as a team. The book takes the reader on a journey to illustrate various professional and therapeutic roles in how to playfully engage children through a range of case vignettes.
