Making Sense of Neuroscience in the Early Years Sally Featherstone, 2017-11-16 Translating research about child neuroscience into practice in education is a daunting prospect for most practitioners In fact many see it as fraught with difficulties and risky However the importance of this research has never been more important The context of the early years in the UK has seen considerable changes within recent years with a raft of government regulation and guidance and a national move to free childcare entitlement at increasingly earlier ages Combined with a mounting pressure for accountability in Closing the Gap between disadvantaged children and those more fortunate these pressures make it fundamental that those working with young children understand what neuroscience is telling us and more important what it is not Practitioners teachers managers and governors in settings and schools will not only be called to account for the attainment of their children as measured in tests but in the way children are prepared for lifelong learning which will support them for the rest of their school lives and beyond This book is a comprehensive position statement for practitioners that highlights where we are now what we know what we don't know what research developments mean for practitioners and setting and how this fits in with the government expectations within the EYFS framework Sally Featherstone covers the current thinking in educational research and neuroscience how some of this has been misinterpreted by early adopters or over enthusiastic promoters and how new information can help practitioners to be more effective in their work with young children

Stop the Violence in Latin America Laura Chioda,2017-06-19 The Latin America and Caribbean LAC region has the undesirable distinction of being the world's most violent region with 24.7 homicides per 100 000 inhabitants The magnitude of the problem is staggering and persistent Of the top 50 most violent cities in the world 42 are in LAC In 2010 alone 142 302 people in LAC fell victim to homicide representing 390 homicides per day and 4.06 homicides every 15 minutes Crime disproportionately affects young men aged 20 to 24 whose homicide rate of 92 per 100 000 nearly quadruples that of the region The focus of Crime Prevention in Latin America and the Caribbean is to identify policy interventions that whether by design or indirect effect have been shown to affect antisocial behavior early in life and patterns of criminal offending in youth and adults Particular attention is devoted to recent studies that rigorously establish a causal link between the interventions in question and outcomes This publication adopts a lifecycle perspective and argues that as individuals progress through different stages of the lifecycle not only do different sets of risk factors arise and take more prominence but their interactions and interdependencies shape human behavior These interactions and the relative importance of different sets of risk factors identify relevant margins that can effectively be targeted by prevention policies not only early in life but throughout the lifecycle Indeed prevention can never start too early nor start too late nor be too comprehensive **Harold Gasson's**
