Thermal and Mineral Waters Werner Balderer, Adam Porowski, Hussein Idris, James W. LaMoreaux, 2014-03-17 This is a compilation of manuscripts on mineral and thermal waters of different areas of the world This special volume is devoted to the 41st Meeting of the Commission on Mineral and Thermal Waters of International Association of Hydrogeologists IAH CMTW held in Cairo Egypt in October 2009 The presentations collected and presented in this volume show the variety of aspects of mineral and thermal waters occurrence and utilization in different countries of the world with a special focus on Egypt Iran Ukraine Poland Russia and Australia

Hydrological Modelling and Assessment in Arid Region Using Remote Sensing and GIS: A Case Study in Southeast Sinai, Egypt Ali Hagrass, 2025-10-11 The primary hydrologic parameters in assessing water resources are rainfall and runoff which also play a major role in controlling groundwater recharge In light of the changing global climate the socioeconomics and lifestyle modalities within the research region heavily depend on the hydrologic modelling of the catchments Therefore to simulate and estimate water availability hydrologic models with reliable data must be used In addition reliable rainfall based storm runoff forecasts are also essential for flood hazard mitigation and adaption Floods rank among the catchment s most severe natural disasters causing substantial property damage fatalities and economic risk Furthermore reliable modelling is an effective way to mitigate and prevent these flood threats

The Soils of Egypt Hassan El-Ramady, Tarek Alshaal, Noura Bakr, Tamer Elbana, Elsayed Mohamed, Abdel-Aziz Belal, 2018-08-20 This book reviews the distribution of soils across Egypt their history genesis pollution and management The conservation of Egyptian soils soils and their connections to human activities as well as some future soil issues are also highlighted It is well known that soil is the main source for food feed fuel and fiber production Accordingly the study of soils is not only a crucial issue but also an urgent task for all nations worldwide Due to their important roles in agroecosystems as well as many aspects of our lives soils have direct and indirect functions in the agricultural industrial and medicinal sectors Therefore understanding the physical chemical and biological properties of soils as well as soil security have now become emerging issues Climate change has a very dangerous dimension in Egypt concerning the rising sea level Many coastal zones are already threatened by this sea level rise and may ultimately disappear At the same time water shortages and soil pollution represent the main challenges for the Egyptian nation Generally speaking the environmental challenges that Egypt now faces include improving and sustaining soil health soil carbon sequestration wastewater treatment and avoiding the overuse of fertilizers and pesticides Therefore this book examines in detail the soils of Egypt from various perspectives including their genesis history classification pollution and degradation soil security soil fertility and land uses

Unconventional Water Resources and Agriculture in Egypt Abdelazim M. Negm, 2018-10-13 This unique volume presents up to date information and the latest research findings on unconventional water resources in Egypt and their connections to agriculture It investigates how to cope with the severe shortage of water

and how to improve the irrigation system's efficiency The main aspects addressed include History of drainage and drainage projects in Egypt Towards the integration of irrigation and drainage water Assessment of drainage systems and environmental impact assessment of irrigation projects Maximizing the reuse of agricultural drainage water and agricultural waste to improve irrigation efficiency Developing alternative water resources such as desalination for greenhouses Drainage water quality assessment microbial hazards and improvement of green and cost effective technologies for treatment of agricultural drainage water and wastewater for reuse in irrigation Towards the sustainable reuse of water resources in Egypt Options for securing water resources in Egypt and challenges and opportunities for policy planners This book and the companion volume Conventional Water Resources and Agriculture in Egypt are vital resources for researchers environmental managers and water policy planners and for all those seeking information on wastewater reuse green and cost effective technologies for improving water quality

Geothermal Systems and Energy Resources Alper Baba, Jochen Bundschuh, D. Chandrasekharam, 2014-03-07 In the region comprising Turkey and Greece people have been using water from geothermal sources for bathing and washing of clothes since ancient times This region falls within the Alpine Himalayan orogenic belt and hence is a locus of active volcanism and tectonism and experiences frequent seismic events This volcanic and tectonic activity has given rise to over 1500 geothermal springs Its importance was recognized decades ago and the geothermal water is now being utilized for district heating industrial processing domestic water supply balneology and electric power generation The geothermal potential in this region is large In Turkey alone it is estimated to be more than 31500 MWt while the proven potential is 4078 MWt At present

2084 MWt is being utilized for direct applications in Turkey and 135 MWt in Greece In Turkey electricity is produced for 166 MW installed capacity whereas in Greece geothermal energy is presently not used for electricity production despite its potential This book discusses the geochemical evolution of the thermal waters and thermal gases in terms of the current volcano tectonic setting and associated geological framework that makes the region very important to the geothermal scientific community The book explains in a didactic way the possible applications depending on local conditions and scales and it presents new and stimulating ideas for future developments of this renewable energy source Additionally the book discusses the role s of possible physicochemical processes in deep hydrothermal systems the volatile provenance and relative contributions of mantle and crustal components to total volatile inventories It provides the reader with a thorough understanding of the geothermal systems of this region and identifies the most suitable solutions for specific tasks and needs elsewhere in the world It is the first time that abundant information and data from this region obtained from intensive research during the last few decades is unveiled to the international geothermal community Thus an international readership in the professional and academic sectors as well as in key institutions that deal with geothermal energy will benefit from the knowledge from geothermal research and experiences obtained from the Aegean Region
