Engineering Thermodynamics Yumin Zhang, 2022-06-01 *Engineering Thermodynamics* is a core course for students majoring in Mechanical and Aerospace Engineering Before taking this course students usually have learned *Textile Engineering Mechanics Statics and Dynamics* and they are used to solving problems with calculus and differential equations Unfortunately these approaches do not apply for *Thermodynamics* Instead they have to rely on many data tables and graphs to solve problems In addition many concepts are hard to understand such as entropy Therefore most students feel very frustrated while taking this course The key concept in *Engineering Thermodynamics* is state properties If one knows two properties the state can be determined as well as the other four properties Unlike most textbooks the first two chapters of this book introduce thermodynamic properties and laws with the ideal gas model where equations can be engaged In this way students can employ their familiar approaches and thus can understand them much better In order to help students understand entropy in depth interpretation with statistical physics is introduced Chapters 3 and 4 discuss control mass and control volume processes with general fluids where the data tables are used to solve problems Chapter 5 covers a few advanced topics which can also help students understand the concepts in thermodynamics from a broader perspective
