Thermodynamics Fourth Edition Principles Characterizing Physical And Chemical Processes:

Thermodynamics Jurgen M. Honig,1999-06-14 This book provides a concise overview of thermodynamics and is written in a manner which makes the difficult subject matter understandable Thermodynamics is systematic in its presentation and covers many subjects that are generally not dealt with in competing books such as Carath odory s approach to the Second Law the general theory of phase transitions the origin of phase diagrams the treatment of matter subjected to a variety of external fields and the subject of irreversible thermodynamics The book provides a first principles postulational self contained description of physical and chemical processes Designed both as a textbook and as a monograph the book stresses the fundamental principles the logical development of the subject matter and the applications in a variety of disciplines This revised edition is based on teaching experience in the classroom and incorporates many exercises in varying degrees of sophistication The stress laid on a didactic logical presentation and on the relation between theory and experiment should provide a reader with a more intuitive understanding of the basic principles Graduate students and professional chemists in physical chemistry and inorganic chemistry as well as graduate students and professionals in physics who wish to acquire a more sophisticated overview of thermodynamics and related subject matter will find this book extremely helpful Takes the reader through various steps to understanding Review of fundamentals Development of subject matter Applications in a variety of disciplines **Thermodynamics** Jurgen M. Honig,1982 **Routledge Library Editions: Philosophy of Time**

Various Authors,2021-03-05 Reissuing five works originally published between 1937 and 1991 this collection contains books addressing the subject of time from a mostly philosophic point of view but also of interest to those in the science and mathematics worlds These texts are brought back into print in this small set of works addressing how we think about time the history of the philosophy of time the measurement of time theories of relativity and discussions of the wider thinking about time and space among other aspects One volume is a thorough bibliography collating references on the subject of time across many disciplines

Lyons,2015-08-26 This updated and expanded second edition of the Thermodynamics Principles Characterizing Physical and Chemical Processes provides a user friendly introduction to the subject Taking a clear structural framework it guides the reader through the subject s core elements A flowing writing style combines with the use of illustrations and diagrams throughout the text to ensure the reader understands even the most complex of concepts This succinct and enlightening overview is a required reading for all those interested in the subject We hope you find this book useful in shaping your future career Business Feel free to send us your inquiries related to our publications to info@pwpublishers.com

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to

apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
