The Thermophysical Properties of Metallic Liquids Takamichi Iida, Roderick I. L. Guthrie, 2015 This first volume provides the basic matters needed for understanding the thermophysical properties of metallic liquids and for developing reliable models to accurately predict the thermophysical properties of almost all metallic elements in the liquid state together with methods for quantitative assessment of models equations The authors also review the structure of metallic liquids which is based on the theory of liquids density volume expansivity thermodynamic properties evaporation enthalpy vapour pressure heat capacity sound velocity surface tension viscosity diffusion and electrical and thermal conductivities Finally the essential points of methods used for measuring these experimental data are presented [The Thermophysical Properties of Metallic Liquids](#) Takamichi Iida, Roderick I.
