

Suppose the durations of human pregnancies follow a mound-shaped distribution with a mean of 264 days and a standard deviation of 18 days.

a. Approximately what percentage of human pregnancies last between 246 and 282 days?

1% %

b. Between what two values will the durations of 95% of all human pregnancies fall? Convert these values to months (with decimals), assuming the typical month has 30 days.

Round your answers to one decimal place. Enter your answers in increasing order.

The durations of 95% of all human pregnancies last between 1.8 and 5.5 months.

Suppose also that the durations of horse pregnancies follow a mound-shaped distribution with a mean of 339 days and a standard deviation of 4 days.

c. Is a horse or a human more likely to have a pregnancy that lasts within 2.8 days of its mean? Explain briefly.

A horse is more likely to have a pregnancy that lasts within 2.8 days of its mean because the standard deviation for horse pregnancies is 4 days.

Publishing, 2003-01-01 **Bayesian Computation with R** Jim Albert, 2009-04-20 There has been dramatic growth in the development and application of Bayesian inference in statistics. Berger 2000 documents the increase in Bayesian activity by the number of published research articles, the number of books

and the extensive number of applications of Bayesian articles in applied disciplines such as science and engineering. One reason for the dramatic growth in Bayesian modeling is the availability of computational algorithms to compute the range of integrals that are necessary in a Bayesian posterior analysis. Due to the speed of modern computers, it is now possible to use the Bayesian paradigm to fit very complex models that cannot be fit by alternative frequentist methods. To fit Bayesian models, one needs a statistical computing environment. This environment should be such that one can write short scripts to define a Bayesian model, use or write functions to summarize a posterior distribution, use functions to simulate from the posterior distribution, construct graphs to illustrate the posterior inference. An environment that meets these requirements is the R system. R provides a wide range of functions for data manipulation, calculation, and graphical displays. Moreover, it includes a well-developed simple programming language that users can extend by adding new functions. Many such extensions of the language in the form of packages are easily downloadable from the Comprehensive R Archive Network (CRAN). **Workshop**
