Dynamics and Theoretical Electrical Engineering Kyandoghere Kyamakya, Wolfgang A. Halang, Wolfgang Mathis, Jean Chamberlain Chedjou, Zhong Li, 2013-04-02 This book contains a collection of recent advanced contributions in the field of nonlinear dynamics and synchronization including selected applications in the area of theoretical electrical engineering The present book is divided into twenty one chapters grouped in five parts The first part focuses on theoretical issues related to chaos and synchronization and their potential applications in mechanics transportation communication and security The second part handles dynamic systems modelling and simulation with special applications to real physical systems and phenomena The third part discusses some fundamentals of electromagnetics EM and addresses the modelling and simulation in some real physical electromagnetic scenarios The fourth part mainly addresses stability concerns Finally the last part assembles some sample applications in the area of optimization data mining pattern recognition and image processing

Mathematical Methods for Scientists and Engineers Peter B. Kahn, 2004-01-01 Appropriate for advanced undergraduate and graduate students in a variety of scientific and engineering fields this text introduces linear and nonlinear problems and their associated models The first part covers linear systems emphasizing perturbation or approximation techniques and asymptotic methods The second part comprises nonlinear problems including weakly nonlinear oscillatory systems and nonlinear difference equations The two parts both of which include exercises merge smoothly and many of the nonlinear techniques arise from the study of the linear systems 1990 edition 70 figures 4 tables Appendix Index *Creep and Relaxation of Nonlinear Viscoelastic Materials* William Nichols Findley, James S. Lai, Kasif Onaran, 1989-01-01 Pioneering book presents basic theory experimental methods and results and solution of boundary value problems Topics include creep stress and strain deformation analyses multiple integral representation of nonlinear creep and relaxation and much more Appendices Bibliography *Asymptotics of Elliptic and Parabolic PDEs* David Holcman, Zeev Schuss, 2018-05-25 This is a monograph on the emerging branch of mathematical biophysics combining asymptotic analysis with numerical and stochastic methods to analyze partial differential equations arising in biological and physical sciences In more detail the book presents the analytic methods and tools for approximating solutions of mixed boundary value problems with particular emphasis on the narrow escape problem Informed throughout by real world applications the book includes topics such as the Fokker Planck equation boundary layer analysis WKB approximation applications of spectral theory as well as recent results in narrow escape theory Numerical and stochastic aspects including mean first passage time and extreme statistics are discussed in detail and relevant applications are presented in parallel with the theory Including background on the classical
