Critical Incident Stress Management in Aviation Jörg Leonhardt, Mr Joachim

Vogt, 2012-10-01 Critical incident stress management CISM is now a well established method in crisis intervention and one

that is clearly needed within aviation. However, there are many peculiarities in this branch of CISM which require thorough consideration. People working in high reliability environments need to be sensitive to others' reactions to critical stress. They are the normal reactions of normal people in abnormal situations. However, to ensure this, a proper programme must be put in place based on a scientific and standardized approach. This book describes the various methods and elements of the CISM model as well as their interventions. It also investigates the benefits of CISM on the individual level and on an organisational/strategic level. It details CISM training and courses and features a case study based on the Berlingen accident of 2002. Critical Incident Stress Management in Aviation will be of direct relevance to human factors experts, safety managers, ATCOs and air navigation service providers, though there is also much that will be of interest to aviation physicians, psychologists and airport/airline managers.

This valuable resource explores the array of practices and approaches that provide effective and safe ways to prevent and reduce conflict, de-escalate conflict and aggressive behavior, and train educators in crisis intervention. Sandra Smith's

Review for NCLEX-PN Sandra Smith, 2010-10-15. Review Guides Certification Prep Pocket Guides. **Cognitive Therapy and Dreams** Arthur Freeman, EdD, ABPP, 2003-12-23. Expanded from a special issue of the Journal of Cognitive Psychotherapy, this volume contains some of the most interesting and promising work on dreams coming from therapists and researchers working at the crossroads of cognitive therapy and other systems. From a reprint of Beck's only article on cognition and dreams to the influence of modern neurobiology on the use of dreams in cognitive therapy, these chapters provide a meta-theory of dreams that is unique to the cognitive perspective. As such, they begin the process of generating a comprehensive cognitive model of dream work that includes cognitive, affective, physical and behavioral features from which future research and clinical innovations can be built.
