Thermo Fisher Scientific User Manuals:

Handbook of GC-MS Hans-Joachim Hübschmann, 2015-04-22 The only comprehensive reference on this popular and rapidly developing technique provides a detailed overview ranging from fundamentals to applications including a section on the evaluation of GC MS analyses As such it covers all aspects including the theory and principles as well as a broad range of real life examples taken from laboratories in environmental food pharmaceutical and clinical analysis It also features a glossary of approximately 300 terms and a substance index that facilitates finding a specific application For this new edition the work has been now extended to two volumes reflecting the latest developments in the technique and related instrumentation while also incorporating several new examples of applications in many fields The first two editions were very well received making this handbook a must have in all analytical laboratories using GC MS Forensic DNA Analysis Catherine Cupples Connon, 2023-07-13 This volume focuses on the latest techniques used in forensic DNA analysis The chapters include a comprehensive collection of extraction quantification STR amplification and detection methods for routine forensic samples including manual semi automated and automated procedures using both home brew and commercial products The chapters also discuss probabilistic modeling software and specialized start to finish procedures for mitochondrial DNA analysis archived latent fingerprints latent DNA rapid DNA profiling and next generation sequencing Written in the highly successful Methods in Molecular Biology series format chapters include introduction to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Cutting edge and practical Forensic DNA Analysis Methods and Protocols is a valuable resource for researchers interested in learning more about forensic DNA analysis procedures *WHO manual for HIV drug resistance testing using dried blood spot specimens*, 2020-08-31 *Compulsive Alcohol Self-Administration in Rats* Sanne Toivainen Eloff, 2025-03-12 Alcohol addiction hereafter equated to alcohol dependence according to the WHO ICD 10 classification or moderate to severe alcohol use disorder AUD according to the DSM classification of the American Psychiatric Association is a complex psychiatric illness with an approximate global lifetime prevalence of AUD of 14.1 % and 3.4 % for men and women respectively Only a subset of alcohol users develop addiction suggesting that research to discover novel treatments should consider individual differences in susceptibility for clinically relevant behaviors Continued use of alcohol despite negative consequences commonly referred to as compulsive use is a hallmark of the transition from recreational to addictive use of alcohol Research in animal models has begun to identify mechanisms behind compulsive alcohol taking but the neural basis of individual differences in this behavior remains poorly understood The main aim of this thesis is to investigate the neural mechanisms of individual susceptibility to compulsive alcohol use a key feature of alcohol addiction and the potential role of sex as a biological variable In paper I we characterized susceptibility to developing compulsive alcohol self administration in rats We identified an ensemble of neurons in the central nucleus of the amygdala

CeA that promoted compulsive self administration We identified these neurons as PKC neurons one of two major subpopulations in the central nucleus Lastly we investigated the causal role of PKC itself in compulsive self administration by knocking down its expression and found that this reduced compulsive self administration In paper II we studied the role of the GABAB receptor agonist baclofen in compulsive alcohol self administration and on activity of neurons in the centrolateral amygdala CeL This study provides a mechanistic rationale for developing improved alcohol addiction medications that target GABAB receptors and PKC neurons in the CeL In paper III we characterized sex differences in animal models of alcohol addiction including compulsive alcohol self administration We found that female rats consumed equal amount of alcohol as males in unpunished conditions but that they were more resistant to aversive consequences when alcohol rewards were paired with either footshock or quinine adulteration We investigated potential predictors of compulsive self administration in both sexes and found that for male rats compulsivity was predicted by motivation to obtain alcohol whereas for females compulsivity was promoted by stress pain factors Lastly in paper IV we characterize a novel tool for studying the role of PKC neurons a transgenic rat line that expresses Cre recombinase under the control of the PKC promoter allowing selective access to and control of PKC neurons Collectively these studies highlight PKC expressing neurons in the CeA as critical players in punishment resistant alcohol self administration pointing to a new avenue for developing targeted treatments The findings also emphasize the need for sex specific approaches in both preclinical models and clinical interventions
