Thermodynamics J. P. O'Connell, J. M. Haile, 2011-06-30 Thermodynamics Fundamentals for Applications is a text for a first graduate course in chemical engineering The focus is on macroscopic thermodynamics discussions of modeling and molecular situations are integrated throughout Underpinning this text is the knowledge that while thermodynamics describes natural phenomena those descriptions are the products of creative systematic minds Nature unfolds without reference to human concepts of energy entropy or fugacity Natural complexity can be organized and studied by thermodynamics methodology The power of thermodynamics can be used to advantage if the fundamentals are understood This text s emphasis is on fundamentals rather than modeling Knowledge of the basics will enhance the ability to combine them with models when applying thermodynamics to practical situations While the goal of an engineering education is to teach effective problem solving this text never forgets the delight of discovery the satisfaction of grasping intricate concepts and the stimulation of the scholarly atmosphere

Dynamics of Multiphase Flows Chao Zhu, Liang-Shih Fan, Zhao Yu, 2021-06-17 Understand multiphase flows using multidisciplinary knowledge in physical principles modelling theories and engineering practices This essential text methodically introduces the important concepts governing mechanisms and state of the art theories using numerous real world applications examples and problems Covers all major types of multiphase flows including gas solid gas liquid sprays or bubbling liquid solid and gas solid liquid flows Introduces the volume time averaged transport theorems and associated Lagrangian trajectory modelling and Eulerian Eulerian multi fluid modelling Explains typical computational techniques measurement methods and four representative subjects of multiphase flow systems Suitable as a reference for engineering students researchers and practitioners this text explores and applies fundamental theories to the analysis of system performance using a case based approach

Reid, 1974 As long as we can remember our department has offered a one semester graduate level subject in classical thermodynamics Traditionally it has been applications oriented one of its primary objectives has been to develop competence and self confidence in handling challenging applications in new and sometimes unusual situations Half to two thirds of the contact hours are usually devoted to problem solving We have used a number of texts in conjunction with our graduate subject None were completely satisfactory We are convinced that a firm foundation in theory is essential for students who will be asked to fulfill the needs of tomorrow with an increasing demand for talents which are flexible and adaptable On the other hand the theory is useless unless the student can effectively bridge the gap between theory and application Thus we have attempted to develop a text with a rigorous theoretical and conceptual basis interspersed with a relatively large number of examples and solutions We have stressed to our students the desirability of working these examples before reviewing the solutions This text is intended to be a learning text rather than a teaching text It is our hope that students will attain a basic level of understanding of theory and rationale of applications in their formal use of this text such that deeper insights can be gained in a self instructional mode throughout their professional careers as the need arises
