Summary of Tony Judt's Thinking the Twentieth Century Everest Media,2022-04-30T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 My full name is Tony Robert Judt I have two perspectives on my childhood From one perspective it was an utterly conventional somewhat lonely and very lower middle class London childhood of the 1950s From another perspective it was an exotic distinctive and therefore privileged expression of mid twentieth century history as it happened to immigrant Jews from East Central Europe 2 My father s father Enoch Yudt was a Jewish economic marginal in a state of permanent migration He had no particular skill except selling and not much of that He got by on the black market between Belgium Holland and Germany in the 1920s But things must have gotten a bit warm for him around 1930 because he had to move on 3 My father who was from Belgium had come to Ireland with his family in 1936 In 1936 his brother in London invited him to England He left school at fourteen to work odd jobs While my mother spent her late teens in London she was far more English in her soul than my father who had been born there 4 I was born in 1948 in East London The first thing I remember is walking along Tottenham High Road I have other memories of North London life including looking at trucks and buses out of my parents bedroom window

**Thinking with Cases** Charlotte Furth,Judith T. Zeitlin,Ping-chen Hsiung,2007-02-28 Case studies fascinate because they link individual instances to general patterns and knowledge to action without denying the priority of individual situations over the generalizations derived from them In this volume an international group of senior scholars comes together to consider the use of cases to produce empirical knowledge in premodern China They trace the process by which the project of thinking with cases acquired a systematic and public character in the ninth century CE and after Premodern Chinese experts on medicine and law circulated printed case collections to demonstrate efficacy or claim validity for their judgments They were joined by authors of religious and philosophical texts The rhetorical strategies and forms of argument used by all of these writers were allied with historical narratives exemplary biographies and case examples composed as aids to imperial statecraft The innovative and productive explorations gathered here present a coherent set of interlocking arguments that will be of interest to comparativists as well

as specialists on premodern East Asia For China scholars they examine the interaction of different fields of learning in the late imperial period the relationship of evidential reasoning and literary forms and the philosophical frameworks that linked knowledge to experience and action For comparativists the essays bring China into a global conversation about the methodologies of the human sciences Contributors Chu Honglam Charlotte Furth Hsiung Ping chen Jiang Yonglin Yasuhiko Karasawa Robert Sharf Pierre tienne Will WuYanhong Judith T Zeitlin

**Thinking about Godel and Turing** Gregory J. Chaitin, 2007 Dr Gregory Chaitin one of the world s leading mathematicians is best known for his discovery of the remarkable O number a concrete example of irreducible complexity in pure mathematics which shows that mathematics is infinitely complex In this volume Chaitin discusses the evolution of these ideas tracing them back to Leibniz and Borel as well as GAdel and Turing This book contains 23 non technical papers by Chaitin his favorite tutorial and survey papers including Chaitin s three Scientific American articles These essays summarize a lifetime effort to use the notion of program size complexity or algorithmic information content in order to shed further light on the fundamental work of GAdel and Turing on the limits of mathematical methods both in logic and in computation Chaitin argues here that his information theoretic approach to metamathematics suggests a quasi empirical view of mathematics that emphasizes the similarities rather than the

differences between mathematics and physics He also develops his own brand of digital philosophy which views the entire universe as a giant computation and speculates that perhaps everything is discrete software everything is 0 s and 1 s Chaitin s fundamental mathematical work will be of interest to philosophers concerned with the limits of knowledge and to physicists interested in the nature of complexity      **Utopian Thinking and Social Work** Chris Horsell,2025-02-03 This book

Lemert,2015-12-03 In the eloquent style for

which he has become famous Charles Lemert writes of social theory as no one else Thinking the Unthinkable is offered as text for instruction yet it defies the prevailing assumption that social theory is a method for clarifying the facts of social life Lemert shows how social theory began late in the 19th century as a struggle to come to terms with the failure of modern reason to solve the social problems created by the capitalist world system Since then social theory has developed through twists and turns to think and rethink this Unthinkable Hence the surprising innovations of recent years postmodern queer postcolonial third wave feminist risk theories among others arising in the wake of globalization Once again Lemert has made the difficult clear in a book that students and other readers will treasure and keep      **Thinking Otherwise** Susan A.
