General Information

The THORN Automated Systems' Firequest 200 is a self-contained fire alarm system with a basic capability of two Style B or D (Class B or A) input detection zones and one common alarm Style Y (Class B) output zone. The system is expandable by the addition of optional snap-in zone boards and other auxiliary function boards.

By using four-zone boards, the system can be expanded to 38 Style B (Class B) zones and to 20 zones if Style D (Class A) two-zone boards are used. A complement of over 15 optional function boards gives the Firequest 200 a

great amount of flexibility to meet most applications. The Firequest 200 can provide ring-by-zone or group of zones, audio paging evacuation, sprinkler supervisory monitoring, mastercoder and remote signal transmission by (1) city box connection, (2) telephone lines (dedicated), and (3) digital dialer.

THORN's latest enhancement to the Firequest 200 is an optional 2-way communications loop for interface of analog type sensors, addressable point inputs and addressable remote control elements. With a loop capacity of 198-points, each Loop Control Module (LCM) will accept a mix of sensor, monitor and control points.

The system provides for alarm resound in the event of subsequent alarm conditions and an audible ringback-type trouble sounder. A remote annunciator output is provided for each detection zone. All audible alarm output circuits are supervised for open and short circuit conditions. A short circuit will cause the panel to inhibit or disconnect that output until the short has been removed. The battery is supervised for six different trouble conditions to ensure reliability. Circuits monitoring sprinkler waterflow switches can be field programmable to be non-silenceable as required by UL Standard 864.

The Firequest 200 system provides the capabilities of complying with the newest NFPA requirements for "sprinkler supervisory" conditions, and for supervision of auxiliary control functions required by the Life Safety Code 101.

NOTES:

1. The NFPA Life Safety Code 101 (1988) paragraph 7-6.5.5 requires supervised control circuits for fans, dampers, etc.
2. NFPA Code 72A (1987) paragraphs 3-5.1 to 3-5.4.6 regarding distinctive signals for supervised supervisory devices. See also NFPA 72 Committee Formal Interpretations (FI) #3810 (June 1974), FI 85-9 and FI 85-10. FI 3810 indicates that supervisory devices are not permitted on the same circuit as waterflow alarm switches. FI 85-9 and 85-10 indicate that supervisory conditions are to be distinctively different from system or circuit trouble conditions and that an audible supervisory signal must be capable of resounding in a multi-zone system. Formal Interpretations made by the committee are automatically part of the basic code.
