Workbook for methods of macroeconomic dynamics, 1996 *Methods of Macroeconomic Dynamics* Stephen J. Turnovsky, 2000 Just as macroeconomic models describe the overall economy within a changing or dynamic framework the models themselves change over time In this text Stephen J Turnovsky reviews in depth several early models as well as a representation of more recent models They include traditional backward looking models linear rational expectations future looking models intertemporal optimization models endogenous growth models and continuous time stochastic models The author uses examples from both closed and open economies Whereas others commonly introduce models in a closed context tacking on a brief discussion of the model in an open economy Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field This new edition has been extensively revised It contains a new chapter on optimal monetary and fiscal policy and the coverage of growth theory has been expanded substantially The range of growth models considered has been extended with particular attention devoted to transitional dynamics and nonscale growth The book includes cutting edge research and unpublished data including much of the author's own work

Financial Economics, Risk And Information (2nd Edition) Marcelo Bianconi, 2011-11-29 *Financial Economics Risk and Information* presents the fundamentals of finance in static and dynamic frameworks with focus on risk and information The objective of this book is to introduce undergraduate and first year graduate students to the methods and solutions of the main problems in finance theory relating to the economics of uncertainty and information The main goal of the second edition is to make the materials more accessible to a wider audience of students and finance professionals The focus is on developing a core body of theory that will provide the student with a solid intellectual foundation for more advanced topics and methods The new edition has streamlined chapters and topics with new sections on portfolio choice under alternative information structures The starting point is the traditional mean variance approach followed by portfolio choice from first principles The topics are extended to alternative market structures alternative contractual arrangements and agency dynamic stochastic general equilibrium in discrete and continuous time attitudes towards risk and towards intertemporal substitution in discrete and continuous time and option pricing In general the book presents a balanced introduction to the use of stochastic methods in discrete and continuous time in the field of financial economics

Economic Growth and Macroeconomic Dynamics Steve Dowrick, Rohan Pitchford, Stephen J. Turnovsky, 2006-06-11 The development of the endogenous growth

model rekindled interest in growth theory In contrast to the neo classical model long run endogenous growth emerged as an equilibrium outcome reflecting the behaviour of optimizing agents in the economy This book brings together a number of contributions in growth theory and macroeconomic dynamics reflecting these developments and the ongoing debate over the relative merits of neo classical and endogenous growth models It focuses on the emergence of three important aspects First it develops growth models that extend the underlying theory in different directions Second it addresses one of the concerns of the literature on growth and dynamics the statistical properties of underlying data and the effort to ensure that growth models are consistent with empirical evidence Third it discusses the increasingly international focus of macrodynamics and growth theory an inevitable consequence of the integration of the world economy
