Elements of Being Daniela Hofmann, Jessica Mills, Andrew Cochran, 2005 This volume is the product of a Theoretical Archaeology Group TAG conference session held at Lampeter Wales in December 2003 entitled Mentalities and Identities in Motion Included here are all the papers held there and more besides The session centred on the role of past ways of thinking feeling and acting in social transformation and exploring past worldviews as instead of being

relegated to the fictional or anecdotal an integral part of every aspect of human life not just explicit contexts of power struggles and domination but also approachable from the material evidence The contributions are widely spread across space and time ranging from Northern Ireland to Sicily from France to Bulgaria and covering almost every period from the Mesolithic to the Thirty Years War On top of this they are also very different in methodology in the ways they have interpreted the session title and approached their evidence Before rushing headlong into this kaleidoscopic mix then it is worth briefly explaining the rationale behind the session title and the selection and arrangement of papers

Biodiversity: An Overview Mukesh Kumar,G.S. Paliwal,2011-07-15 India s phytodiversity is one of the most significant in the world India is one of the twelve mega biodiversity centers in the world and also an important center of origin of agrobiodiversity It is therefore very important to study document and conserve the plant wealth of India and also of the world before its possible extinction There are convincing scientific economic and sociological reasons for giving priority to the conservation of the major centers of plant diversity throughout the world The strategies to conserve the biodiversity include establishment of protected area network and corridors with emphasis on appropriate levels of management reduction of anthropogenic pressure on natural populations by cultivating them elsewhere programmes of augmentation reintroduction and introduction of target taxa restoration of degraded habitats etc The conservation strategies can be either in situ conservation of genetic resources within their ecosystem and natural habitat or ex situ conservation of components of genetic material of biological diversity outside their natural habitat The choice of conservation strategy depends upon the nature of the material to be conserved i e the life cycle and mode of reproduction size of individual population and ecological status Ex situ techniques include the establishment of botanical and zoological gardens banks of pollen seed tissue culture DNA etc Establishment of forest reserves national parks protected areas and on farm conservation of valuable plant varieties is being promoted to facilitate their in situ conservation
