environment but also to fulfil the requirements of the specific reuse. Reuses considered are agricultural urban agriculture as a special case of the former municipal and industrial. Alongside these uses the indirect reuse for human consumption through aquifer recharge is also discussed. The third section deals with emerging and controversial topics. Ethical and economical dilemmas in the field are presented as a subject not frequently addressed in this field. The role of governments in respect of public policy in reuse is discussed as well as the different international criteria and standards for reusing wastewater. The importance of public acceptance and the way to properly handle it is also considered. The fourth section of the book presents contrasting case studies typical situations in the developed world. Japan and Germany are compared to those in developing countries Pakistan and Brazil for agricultural and industrial reuse. Indirect planned reuse for human consumption. Germany is compared with an unplanned one Mexico. The Windhoek Namibia case study is presented to emphasize why if the direct reuse of wastewater for human consumption has been performed with success for more than 35 years it is still the only example of this type around the world. To illustrate the difficulties of having a common framework for regulating water reuse in several countries the Mediterranean situation is described. Other case studies presented refer to the reuse situation in Israel Spain Cameroon Nepal and Vietnam these latter countries being located in water rich areas. This book will be an invaluable information source for all those concerned with water reuse including water utility managers wastewater policy makers and water resources planners as well as researchers and students in environmental engineering water resources planning and sanitary engineering.

Keremane,2017-05-09 This book presents a conceptual and practical tool for those involved directly or indirectly in the planning and management of basic provision of water supply wastewater and stormwater services in metropolitan regions by offering insights into governance paradigms and institutional arrangements for urban wastewater reuse in agriculture from Australia and India Instead of focusing on the technical aspects of designing and building infrastructure it provides a better understanding of the institutional and governance challenges of managing urban wastewater particularly for reuse in agriculture As water supplies fall and water stress increases in many areas the potential of wastewater as a resource is being widely recognized Today wastewater re use has become an attractive option for conserving and expanding available water supplies While wastewater re use can have many applications its use in agriculture is the most established and the one with the longest tradition Given the growing competition for freshwater from industry and cities without doubt there is going to be a rapid increase in the global use of treated wastewater making improved wastewater use in agriculture an emerging priority Even though it is a vast resource if we reclaim it properly often most wastewater is wasted Therefore in order to realize the full potential of this resource decision support in policy design and implementation Institutions and Governance is key Institutions and governance frameworks need to provide for the rights of access rights of ownership rights to manage source and treated water and the obligations of final use of recycling operations *SUSTAINABLE URBAN WATER REUSE.*
