Women In Science Career Processes And Outcomes:

Women in Science Yu Xie, Kimberlee A. Shauman, 2003 Why do so few women choose a career in science even as they move into medicine and law in ever greater numbers In one of the most comprehensive studies of gender differences in science careers ever conducted *Women in Science* provides a systematic account of how U S youth are selected into and out of science education in early life and how social forces affect career outcomes later in the science labor market Studying the science career trajectory in its entirety the authors attend to the causal influences of prior experiences on career outcomes as well as the interactions of multiple life domains such as career and family While attesting to the progress of women in science the book also reveals continuing gender differences in mathematics and science education and in the progress and outcomes of scientists careers The authors explore the extent and causes of gender differences in undergraduate and graduate science education in scientists geographic mobility in research productivity in promotion rates and earnings and in the experience of immigrant scientists They conclude that the gender gap in parenting responsibilities is a critical barrier to the further advancement of women in science

Motherhood, the Elephant in the Laboratory Emily Monosson, 2011-08-15 About half of the undergraduate and roughly 40 percent of graduate degree recipients in science and engineering are women As increasing numbers of these women pursue research careers in science many who choose to have children discover the unique difficulties of balancing a professional life in these highly competitive and often male dominated fields with the demands of motherhood Although this issue directly affects the career advancement of women scientists it is rarely discussed as a professional concern leaving individuals to face the dilemma on their own To address this obvious but unacknowledged crisis the elephant in the laboratory according to one scientist Emily Monosson an independent toxicologist has brought together 34 women scientists from overlapping generations and several fields of research including physics chemistry geography paleontology and ecology among others to share their experiences From women who began their careers in the 1970s and brought their newborns to work breastfeeding them under ponchos to graduate students today the authors of the candid essays written for this groundbreaking volume reveal a range of career choices the authors work part time and full time they opt out and then opt back in they become entrepreneurs and job share they teach high school and have achieved tenure The personal stories that comprise *Motherhood the Elephant in the Laboratory* not only show the many ways in which women can successfully combine motherhood and a career in science but also address and redefine what it means to be a successful scientist These valuable narratives encourage institutions of higher education and scientific research to accommodate the needs of scientists who decide to have children
