Constructional and Cognitive Explorations of Contrastive Linguistics Annalisa Baicchi,Cristiano Broccias,2024-02-22 This

book approaches the field of contrastive linguistics from a comparative and robust perspective that combines the tenets of construction grammar and cognitive linguistics. In doing so it shows how their integration can help to successfully enhance research on contrastivity by means of updated theoretical frameworks and applied methodologies that combine language and thought. It compares ten different languages and offers analyses of constructions at all levels of the linguistic organization, identifying the cognitive motivations that instantiate the linguistic data retrieved from corpora. Relevant to both cognitive and non cognitive linguists interested in variation and contrastive approaches as well as graduate students in these areas, this book makes a significant contribution to existing work on the various types of constructional and discourse based phenomena in modern languages. *Mathematics and the Craft of Thought in the Anglo-Dutch Renaissance* Eleanor Chan, 2021-09-30

The development of a coherent cohesive visual system of mathematics brought about a seminal shift in approaches towards abstract thinking in western Europe. Vernacular translations of Euclid's *Elements* made these new and developing approaches available to a far broader readership than had previously been possible. Scholarship has explored the way that the language of mathematics leaked into the literary cultures of England and the Low Countries, but until now the role of visual metaphors of making and shaping in the establishment of mathematics as a practical tool has gone unexplored. *Mathematics and the Craft of Thought* sheds light on the remarkable culture shift surrounding the vernacular language translations of Euclid and the geometrical imaginary that they sought to create. It shows how the visual language of early modern European geometry was constructed by borrowing and quoting from contemporary visual culture. The verbal and visual language of this form of mathematics far from being simply immaterial was designed to tantalize with material connotations. This book argues that in a very real sense practical geometry in this period was built out of craft metaphors.
